Ground Crew:
Celebrate your Humanity by
Embracing your Multi-Dimensional
Individuality

If we-the-human-race are to get to the goal line with sufficient grace and energy left to do the *real* work – *rebuilding, reclaiming, restoring our damaged world* (Earth Goddess, Gaia) – *we'll need a lot more collective, coherent human consciousness to accomplish this than we have at present. (Though many are being activated, the vibration urging action is not strong enough or coherent enough to achieve real gains – yet.)*

I'm not particularly impressed or encouraged at the moment. *The young'uns (millennials, and X'ers some call them) are tied into their ever-present cell and smart phones, which produce a unified field of robotic complacency, smothering critical thinking and “depth” perception – making them vulnerable to malevolent suggestions courtesy of their hand-held devices. And they don't care one whit. They don't even know that they're supposed to care.*

On their own (with millions of others in mind-lock) What happened to “parental guidance”? *It went bye-bye.* I guess parents of millennials are also wedded to their remote appliances, as they caved in to kids crying “everyone's doing it!,” permitted endless video gaming, hours on end hunched over pad-phone-game stations, allowing technology* to babysit their children. *Finding out later that wasn't such a good idea. So, who's teaching the Art of Being Human to all those tech-wrecked kids? (* See “Editor: Confession of a Tech Lover” at the end.)*

Generational Eddies *Ain't all generations of young'uns at odds with their forebears?* A lot of them are, certainly. But today, the Artificial Intelligence presence makes this generational succession that much more extreme – and perilous.

This may sound like a diatribe against the millennials. *It's not.* I'm just responding to a bunch of stuff I read about “Dr. No” (*as in the James Bond flicks*) aka, Klaus Schwab (*and his creepy protégé, Yuval Noah Harari*) about the Fourth Industrial Revolution, and the redundancy of human beings (?!).

And like a lot of other Revolutions in the 19th, 20th and 21st centuries, America is in the thick of it – with its predilection for artificiality (replacing natural with artificial stuff just about everywhere) and a kind of pragmatic despotism (“convenience”).

When everybody thinks the same,

either they're part of the Borg – *a human-robot communal hive being that denied individual freedom in toto (from the “Next Generation” Star Trek), or they're brain-washed. Another possibility is that maybe they're just tuned into the same mind-wave. Whatever. What matters, though, is the collective actions being taken (or not taken as the case may be) to prevent further progress towards a total technocratic* take-over. (“Techno-Totalitarianism”?)*

If more people knew what these World Economic Forum [WEF] - Bilderbergers - Illuminati planet-burners had in store for “us,” “we” might do something *strenuous* to prevent their nasty predictions from being brought further into our current timeline. *But, as I said earlier, too many of “us” are in denial about the pitfalls of techno-fascination to be counted among the Ground Crew struggling to bring forth a better world.*

Some Observations about the One-Eyed Box and its Impact on Social Contacts You may have noticed that now-a-days, people look into their boxes almost constantly rather than into each others' eyes. *Consider the virtually lost art of live conversations:* When people *do* manage to converse face-to-face, *conversations are frequently interrupted by musical beeps from ever-present boxes.* Those little beeps tend to end conversations pretty quickly (*which are less likely to be resumed at their previous intensity or quality*) – a kind of techno-aided “attention deficit disorder.” (*Meanwhile, thousands of 5G satellites have been launched to support this death-dealing convenience.*)

“Boxes? We don't need no stinkin' boxes!” Yeah, seeing the pattern of harm the “little box” has done to our children: *stunting writing and reading skills; stifling independent thinking and real-time learning ability, separation from nature, retarding social skills, while fostering a convenience-led programmed existence and mind-freeze* it's hard to provide positives for the box.

Honestly, considering the overall human impact and environmental harm being done directly and indirectly (*such as billions of e-devices ending up in landfills, depletion of rare earths and precious metals*) I just can't see the benefits. Lots of people will disagree, not surprisingly, *considering the ubiquity of the hand-held devices, the total cultural accommodation to cellphone use, too many gulping down the wireless world but miss seeing the “hook,” like baited fish.* But, I like to remind folks that “old” technology like landline phones *or fiber, etc.,* works very well without most of the accompanying

negative social impacts. *Considering that all this constitutes a very real barrier to making the changes we need, is there real hope for beneficial change?*

As a born optimist, I feel that a few more heroes and group heroics could help save the day, and/or a great awakening revolution for the dastardly plan that the WEF'ers have in store for humanity, that scores of millennials will send those damned things back to their source (*watch out for flying boxes!*) – and even cause an avalanche that buries Bill Gates, Klaus Schwab and his disgusting protégé, Yuval Noah Harari (*more on him, pg 16*). All the Big Tech players, really, are in on the kill, so to speak, to take humanity apart and insert bits of it into machinery.

You're Human Aren't you? If you're human, at least defend your right to exist as a human being, and not a mind-numbed-machine-dominated thing. Courage, Mon Brave!

To become who you were meant to be, you'll have to step away from the herd. *Instead of just accepting the popular group-think as a blueprint for your life, think about what you'd want the rest of your life to be.* Being separate from the herd doesn't feel that great, but it's the price each Individual has to pay for becoming self-actualized (*if we are to avoid the real pitfalls of unconscious mob rule*).

Then, as mindful Individuals, we'll need to tune ourselves to higher harmonies, where a true “meeting of the minds” can occur.

Rose A. Jenkins,
–For the Planet –

Editor: Confession of a Tech Lover

I'M ACTUALLY A GREAT FAN OF TECHNOLOGY AND SCIENCE, having grown up with science fiction, fairytales and mythology. *But I began to see what was happening in Science - learned that real, important, mind-bending breakthroughs were happening but were being sidelined or used for selfish, evil ends. (One example of this relates to what happened with the works and diagrams that Nikola Tesla had which were stolen after his death.) Let's not forget the Agra-tech poisonous applications killing the planet and just about all life forms when organic farming methods work fine and can be scaled up nicely – a solution to saving the planet and feeding people. And so on.*

I also learned that many of these dark-use technologies (*e.g., HAARP, a misapplication of Tesla's vibrational harmonic work*) as well as investigations into psychic phenomenon were being funded and controlled by the “Military-Industrial (Illuminati)-Complex” as Pres. Eisenhower* warned.

Redux of the Wizarding World...

Origins of the Hogwarts School of Magic & Witchcraft*

**Editor's foreword:*

Some people have a strong aversion to the word “witchcraft,” which likely arises from early religious indoctrination or rigid upbringing. I had qualms about this myself, until I became aware of the existence of “white” magic and “black” magic and how they function. Also, I found that there were plenty of historical magicians, and like everything else, some were benevolent, some weren’t.

“Editor's Confession, cont. from pg. 2

**Aside: Lo, and Behold! As I was preparing this – what turned out to be a double issue – I found that Robert Kennedy was talking about this very thing. Synchronicity? Mind-meld? (See pg 19.)*

Then, I became disillusioned, disgusted, horrified, then eventually angry. *I saw that the Oil Vandals were bringing on climate change, preventing higher fuel efficiencies from being adopted, provoking murderous wars – even though there was a higher, spiritualized technology available but was being withheld. We and everything on earth were to be sacrificed to oil interests (and the entire energy cartel). (See Dr. Greer's opening segment in “Why we (continue) to Fight,” pg 7.)*

I undertook to go on a Truth Quest, indulging my raging curiosity and willing to look in places that “orthodox” thinkers feared to tread. I learned many things; checked “conspiracy theories” with an open mind; read material by legitimate researchers, saw where they intersected in that sacred place called “truth.” I felt my intuition expanding as I actively sought answers to questions I posed to myself.

No Shortcuts This kind of Truth Quest can’t be “downloaded” or performed by someone else remotely. It has to take place within each of us. *Besides, I never thought ignorance was bliss, though it has to be acknowledged that Truth is often an uncomfortable fit.* And like all travelers, I found the journey more rewarding than just standing still. ♦

Comparing Voldemort's Notebook and Omnipresent Cellphones – A Very Short “Chamber of Secrets” Synopsis (spoilers):

A Tale from the Wizarding World

In JK Rowling's Harry Potter, Book II, “The Chamber of Secrets,” Malfoy (*the senior*), dropped a small notebook-sized object into Ginny Weasley's basket of goodies at the beginning of the school term at

“White Magic” aims to develop one's natural creativity and manifestation skills without harming others. *Any natural healer practices “white magic,” working with will, intention, and vision using crystals, herbs and sacred geometry. Even praying – using music, incense and candles is another form of white magic, as is becoming aware of Nature Spirits, unseen forces and so on.*

“Black Magic,” sets up a kind of Hogwarts (*School of Magic, and so on*). That little notebook-sized thing was a dark magic object created by, yes, we have to name him, Voldemort.

The notebook included an earlier version of himself, as Tom (Marvolo) Riddle, who inserted a kind of artificial intelligence, “*call and response*,” into the notebook: *whenever Ginny wrote something into it, a fragment of Voldemort's soul-mind would respond. I believe Voldemort wrote in the notebook, “Hello, Ginny,” or something like that, initiating the conversation.* The parallel is that in both the notebook and the “box” (smart phone, whatever) words appear “as if by magic.”

The malicious splinter of “*he who must not be named*” residing in the notebook induced Ginny to do some terrible things – a kind of mind-sleep that overwhelmed her powers of decision and discernment, so that she complied with V's suggestions, helping to spread terror among her classmates and so on. *Finally, though, she gained enough self-awareness to become disgusted with herself, and tried to “drown” the evil spell-inducer into one of the urinals in the girls' bathrooms. Caused a great overflow, which in turn alerted the instructors and students that something was really, really wrong with Ginny... and finally the truth came out.*

How Harry Did It. Harry was able to rescue the hypnotized Ginny and dispose of the Chamber of Secrets' guardian, a huge basilisk (serpent). *Harry, through his loyalty and faith in Dumbledore, received a boon to help him in his battle. Dumbledore's phoenix, Fawkes, appeared and dropped the Sorting Hat (which held more than meets the eye) down to Harry, out of which he drew the Sword of Gryffindor. Then the battle was on. He defeated the basilisk (an ally of Riddle/ Voldemort), and in an inspired stroke, so to speak, used a fang from the basilisk to stab the damned notebook (ending that embedded version of Voldemort). Good for Harry! A fine example of heroism if I ever saw it!* ■

“klepto-field,” stealing power from others, storing up personal power to use against others for selfish, dark purposes, coercion, bending others to your will, imposing negative conditions on others, actively trying to pull in demons, (ugh), etc.

You may have your own definitions of white vs black magic, but these may do for starters. ♦

Comparing “the Box” with Voldemort's Horcrux cum Notebook also see previous column

JK Rowling displayed amazing depth of vision in her Harry Potter books, (*reminiscent of JRR Tolkien's “The Hobbit,” “Lord of the Rings,”* and the “*Silmarillion*.”) As a veteran of fairytales and the like, I appreciated her characters and their trials, as well as the emphasis placed on how inherent magical skills (*the ability to affect the world around us through Intention*) could be developed, as they were at Hogwarts.

Being a thorough person, as these characters and settings loomed up in my mind's eye, I looked for a parallel to the “dark magic cum science” running riot in our world, especially “Artificial Intelligence.” Yes, dark magic (or dark science) has us in its grip, but bringing **Courage, Wisdom, Devotion and Skill** to the cause of keeping humanity free from tyranny, we can possibly imagine our way out of the dark pits put in place by those with malicious design and uncaring hearts. ♦

Origins of Hogwarts Schools of Magic

Material obtained from wizardingworld.com/features/origins-of-hogwarts-school-of-witchcraft-and-wizardry. Originally published on Pottermore (Dec. 10, 2017). Posted Jan. 1, 2018. Abridged. Some modification. Excerpts reprinted as “fair use.” Edited for brevity, clarity and/or flow. Also includes material from harrypotterfan.com. Images of the various house founders and characteristics from that site.

Hogwarts was founded by two wizards and two witches. At some point in the tenth century, four of the greatest witches and wizards that ever lived founded **Hogwarts School of Witchcraft and Wizardry**. Their names were Godric Gryffindor, Rowena Ravenclaw, Helga Hufflepuff and Salazar Slytherin. ...

Their reason for doing so was because they had the ‘selfsame yearning, to make the world's best magic school’, and once they did, each created their own

house to represent a personality and skill that they wanted to nurture.

Gryffindor students embodied *bravery and chivalry*; **Ravenclaw**, *intelligence and wit*; **Hufflepuff**, *loyalty and fair play*; and **Slytherin**, the values of being sly and cunning. [*Ed's: Willing to extract as much power from a given situation as they could for good or ill.*]

Hogwarts castle was built in Scotland, away from Muggle eyes* – The tenth century was a dangerous time for witches and wizards, who were being persecuted by Muggles hostile to magic. Therefore, Hogwarts was built somewhere in the Scottish Highlands, and concealed with numerous charms and spells to make it impossible for Muggles to trespass. *For instead of an enormous school, any passing Muggle would only see ruins and signs warning them of danger.* [**Ordinary folk.*]

The castle itself was huge and complex Hogwarts has a long history of ancient magic, and **Albus Dumbledore** admitted that not even he knew all of its secrets. Indeed, much about the design and construction of Hogwarts remains a mystery. *Did the founders implement the Anti-Disapparition Jinx? Where did the Room of Requirement come from? Why did they build a school next to a dark and dangerous forest?* ...

The founders of Hogwarts were originally friends. [*Yet, that changed once it became clear that Salazar Slytherin had a very different idea about what he wanted Hogwarts to be.*] Slytherin distrusted Muggle-born wizards, and *believed that only ‘pure-blood’ students should be allowed to attend Hogwarts.* The other founders disagreed – especially Godric Gryffindor, *who was, up until then, Slytherin's greatest friend. Their argument – possibly a duel – resulted in Slytherin leaving the school behind.*

Salazar Slytherin left, but not before... he built the **Chamber of Secrets**. The story goes that the hidden chamber was kept secret from the other founders, and was sealed until Slytherin's ‘true heir’ arrived at the school: *a student who would be able to unseal the Chamber of Secrets and unleash the Basilisk inside*, a huge snake that would purge the school of Muggle-born wizards. ...

Cilantro and Parsley

© Brian Vaszily, theartofantiaging.com
Material obtained above site (Feb. 20, 2023).

Cilantro You're probably familiar with cilantro as a seasoning in many Mexican and Asian dishes. However, cilantro is originally a plant from the Middle East -- and it's been used for at least 5000 years and has even been found in ancient Egyptian tombs!

Now, people tend to either love it or hate it because of its strong and unique flavor. The green leaves of cilantro and its seeds (known to us as coriander) both con-

"The whole cilantro plant is loaded with antioxidants, especially one called quercetin.

"... specific antioxidants in cilantro have also shown an ability to protect skin from photoaging..."

" Like cilantro, fresh parsley leaves are packed with beneficial antioxidants that [help] reduce inflammation and protect against free radical damage [and] is especially high in vitamin A and vitamin C..."

"...niacin can help prevent and reverse a variety of diseases and other conditions, including arthritis, ADHD, many forms of mental illness, cardiovascular disease, aging, alcoholism, Alzheimer's, cancer, cholera, Huntington's disease, migraine, multiple sclerosis, nephritis (kidney inflammation), Parkinsonism, PTSD [Post Traumatic Stress Disorder] Raynaud's disease, and a variety of skin conditions. There is a special chapter focused on the recent COVID-19 pandemic: how niacin can help the body recover from infection and reduce the risk of 'Long COVID'."

tain several anti-aging properties. The whole cilantro plant is loaded with antioxidants, especially one called quercetin.

Quercetin* has been found to have an anti-inflammatory effect, which may help to lower chronic inflammation in your body. [*Ed's: One of the early Covid treatments the "medical establishment" penalized for actually helping keep people alive.]

The specific antioxidants in cilantro have also shown an ability to protect skin from photoaging. Photoaging happens when your skin is damaged by UV rays from the sun. It can cause premature wrinkles to form and your skin to look older than it is.

Another fascinating benefit of cilantro is that it [helps rid the body] of heavy metals. Depending on where you live and what you've been exposed to, heavy metals can accumulate in your body over time, causing problems and weakening your immune defenses. Cilantro appears to be able to bind these toxins together and help your body get rid of them. Studies so far show it may be particularly helpful with lead poisoning and accumulation of mercury.

While cilantro* can be a great herb for longevity, again, the taste is not for everyone. (In fact, it is estimated that between 4 to 14% of the population finds that cilantro tastes soapy.)

*Editor's note: Those who don't particularly enjoy the taste of cilantro may find the

organic herb in dried, loose form that you can put into empty capsules or buy capsule supplements from an organic herb vendor. Also, there are detox tinctures such as Planetary Herbals' "Cilantro Heavy Metal Detox," which contain several herbs to assist in detoxification. ◇

Parsley Parsley is native to the Mediterranean region and has been cultivated for at least 2000 years. And it was used for medicinal purposes long before being consumed as a food!

Like cilantro, fresh parsley leaves are packed with beneficial antioxidants that may help reduce inflammation and protect against free radical damage. And parsley is especially high in vitamin A and vitamin C... These vitamins both have antioxidant properties and are vital for immune health (vitamin C) and eye health (vitamin A). Parsley is also extremely high in vitamin K... Vitamin K is hugely important for supporting bone health and density. (Women typically start to lose bone density as they age, especially when they go through menopause.) Getting enough vitamin K in your diet may help prevent this as well as decreasing your risk of bone fractures.

So, this makes parsley an especially good anti-aging herb for women to consider! [Ed.'s: Parsley is also lovely to add to olive oil and pasta dishes. And salads, soups, green drinks. And as a topping on your pet's wet food.] □

Brian Vaszily, Founder, The Art of Anti-Aging, 1144 E State St, Ste A310, Geneva, IL 60134-2439.

Niacin: The Real Story, 2nd Edition

Material obtained from greenmedinfo.com. Excerpt reprinted as "fair use." Abridged. Edited for brevity, clarity, and/or flow. Editor's comments, etc., in square brackets. References omitted.

– Review and Synopsis –

Turner Publishing, 2023 (Jan. 17, 2023). Reviewed by Robert G. Smith, PhD, Research Associate Professor, Univ. of Pennsylvania.

NIACIN (VITAMIN B3) is a biomolecule required by all forms of life. It func-

tions as a precursor to NAD,* an enzymatic co-factor in hundreds of metabolic pathways.

*NAD: from *medical-dictionary.thefreedictionary.com/NAD*: nicotinamide-adenine dinucleotide ... a coenzyme that is involved in many biochemical oxidation-reduction reactions. The symbols for the oxidized and reduced forms are NAD and NADH. [The "H" at the end represents another electron/hydrogen atom added, i.e., a "negative" charge "reducing" the molecule. Electrons are defined as having a "-" charge, while the nucleus has a "+" charge.]

Niacin is called a *vitamin* because the body can only synthesize it slowly [so a sufficient amount is required to be obtained from the diet or supplements]. The reason that we cannot synthesize adequate amounts of niacin [may] be traced back to evolutionary pressure. Over millions of years, niacin was readily available from plant- and animal-based foods, so our bodies have evolved to rely on this dietary source.

However, larger amounts of niacin than the minimum required by the body are helpful because they allow our metabolic pathways to function at full speed for optimal health and to prevent disease. Some individuals are dependent upon high levels of niacin for health because of their genetic background or because of severe stress. For these individuals, much higher doses of niacin than the minimum dose can prevent and reverse disease. ...

Several chapters focus on the different forms of the molecule... [and] how niacin can help to prevent and reverse a variety of diseases and ... conditions, including arthritis, ADHD, many forms of mental illness, cardiovascular disease, aging, alcoholism, Alzheimer's, cancer, cholera, Huntington's disease, migraine, multiple sclerosis, nephritis (kidney inflammation), Parkinsonism, PTSD [Post Traumatic Stress Disorder], Raynaud's disease [narrowing of blood vessels to the skin], and a variety of skin conditions. There is a special chapter focused on the recent Covid-19 pandemic: how niacin can help the body recover from infection and reduce the risk of "Long COVID."

A major focus of the book is how niacin supplements, along with adequate doses of all the other essential nutrients (vitamins and minerals) and a healthy diet that avoids sugar and processed foods, can prevent and even reverse a variety of diseases. ... The optimal dose varies with the individual and the state of inflammation and disease ...

On the "Niacin Flush" [skin reddening]

Authors:

Most people flush when they first start taking high doses and gradually get adapted to it, unless they stop for a few days and then resume. A few cannot ever get used to it and take no-flush niacin. The intensity of the flush is variable. Generally the people who need it the most flush the least. That includes arthritics, schizophrenics, and elderly people with cardiovascular disease. Some schizophrenics do not flush until they get well ...

In this revised edition ... authors Hoffer, Foster, and Saul clearly present the practical details of niacin treatment. Inevitable physician skepticism, and questions about niacin's proven safety and effectiveness, are thoroughly addressed in this book. However,

Gold, Precious Inside and Out

Colloidal Gold, Monatomic Gold and Alchemy — David Hudson’s Surprise Discovery

Material obtained from various sites. Excerpts reprinted as “fair use.” Abridged. Edited for brevity, clarity, and/or flow. Editor’s comments, etc., in square brackets. References omitted.

The History of Colloidal Gold

DURING THE MIDDLE AGES, soluble gold, a solution containing gold salt, had a reputation for its curative property for various diseases.

In 1618, **Francis Anthony**, a philosopher and member of the medical profession published a book called *Panacea Aurea, sive tractatus duo de ipsius Auro Potabili*.^{*} which introduced information on the formulation of colloidal gold and its many medical uses. (

^{*}An abstract on the medical and cosmetic uses of nano gold mentions this book; see article following. Translation: *Gold Potion, or two treatments of potable gold*). The book introduces information on the formation of colloidal gold and its medical uses.)

Not long after that, in 1656, **Nicholas Culpepper**, an English botanist, published his book called *Treatise of Aurum Potabile*, which was solely about the medical uses of colloidal gold.

In 1857, scientist **Michael Faraday** then experimented with gold leaf and concocted a ruby red solution he named “activated gold” due to its impressive properties of light and matter.

Since then, colloidal gold and various other colloidal systems like colloidal silver have long been widely used as labels^{*} for antigens in biological electron microscopy. (**A label is a molecule that aids in indentifying an antigen-antibody complex.*)

Gold nanoparticles are a subject of research because they have unique optical properties and rare electron and molecular recognition properties that researchers believe have a massive potential in biomedicine and nanotechnology. Colloidal gold particles can be attracted to biological probes like antibodies, receptors, lectins, superantigens, glycans, and nucleic acids. ...

Side Effects of Colloidal Gold? There are very few side effects associated with colloidal gold at 20-40 ppm (parts per million) in the ruby red range.

At first, you may feel sleepy and light-headed when you take colloidal gold, but this feeling generally disappears within the first few days.

Caveat: People with a skin allergy to gold should not consume colloidal gold.

Colloidal Gold for...

Cognitive Function – One colloidal gold study using human participants showed a 20% increase in IQ scores after four weeks on 30mg colloidal gold per day.

Rheumatoid Arthritis – In 1997, researchers found that colloidal gold effects on rheumatoid arthritis were fast and dramatic, with a significant reduction in swelling of the joints and tenderness after only one week on colloidal gold.

Addiction – Colloidal gold has been used to treat alcoholism since the 19th Century.

Today it is used to treat alcohol, cigarette, and narcotics addiction. ...

Make sure your colloidal gold always has a clear, ruby red color to it. If not, discard the solution. ... □

Alchemy, and the Monatomic Gold — David Hudson’s Surprise Discovery

Material from monatomic-orme.com/david-hudson/. Abridged. Some modification.

Alchemy, Some Historical Points of Reference

© by Brendan Georgeson.

FOR THE EGYPTIANS, ALCHEMY WAS A MASTER SCIENCE, [which it was said, was revealed to them by Thoth, who was also called **Hermes Trismegistus**, (thrice great) by the Greeks]...

The goal of alchemy is to transform the base or common into the pure or rare. Put another way, alchemy can be considered to be the transmutation of matter into spirit. Alchemists sought the *Philosopher’s Stone and the Elixir of Life*, which were thought to impart higher spiritual consciousness, cure physical maladies, and confer eternal life.

Alchemists believed that there was a hidden and higher order of reality, which constitutes the basis of all spiritual truths and all spirituality. Perceiving and realizing this higher order of reality was the work of alchemists “*the Magnum Opus or The Great Work “the Absolute Realization.”*

To perceive this truth requires the consciousness to be radically altered and transmuted from ordinary (lead-like) level of everyday perception to a subtle (gold-like) level of higher perception, so that every object is perceived in its perfect form, “*The Beauty of All Beauty, the Love of All Love, the Holy of Holies, the Highest High.*” This is a material and a spiritual realization at once. **Alchemists work in three worlds: the spiritual, the elemental, and the material. “As above, so below. As below, so above.”**

There are precise correspondences between the visible and invisible, matter and spirit, planets and metals. Alchemists understand this basic truth so that while they are working in their physical lab creating their physical Stones and Elixirs, they are simultaneously working subtler levels. The Great Work is realized at the apex of the triangle where the three worlds meet.

And then Science gets “enlightened”...

Quantum physics tells us that matter has particle-like and wave-like properties, and that the subatomic “particles” that make up matter (protons, neutrons, and electrons) are pure energy. *Light also can either be a wave or a stream of particles called photons, packets of pure energy in which the amount of energy is directly proportional to the frequency of the light.* New science, then, tells us that *all matter, including our physical bodies, consist of forms of light and, therefore, is pure energy in essence.* Matter is light whose frequency has been slowed down and lowered ... [finally becoming] solid.

Thus, drawing on the implications of

modern physics, *we can conclude that human beings are made of light held in matter. We are a light body as well as a material body.* ...

To transmute matter into light means to raise its vibrational frequency “from a base, mundane state (*low frequency, dense, slow matter*) to a pure exalted state (*high frequency, high energy light*).

Within the Hermetic Arts, the **Light Body** is called “the immortal body,” *the soma athanaton*. [Pronounced: *SOma ath-AN-a-tos*] So, when **alchemists create the Philosopher’s Stone or Elixir of Life** in pursuit of spiritual and physical perfection and eternal life, **they are creating substances that build up their light body into a strong immortal body. This is where the three worlds meet in exalted spirituality.** ...

This exalted material is called **Ormus** and effects achieved include increased spiritual perception and psychic abilities, the balancing of the left and right hemispheres of the brain, a higher perception of reality as interconnected and whole, and awakening the **kundalini** for a full incarnation of higher dimensional forces and energies, thereby strengthening and healing the etheric and physical body. □

Alchemy: changing the Frequency of Thought

Alter the Harmonics of Matter, and Apply the Elements of Love to Achieve a Desired Result.

© by Dennis William Hauck (Author of *The Complete Idiot’s Guide to Alchemy*)

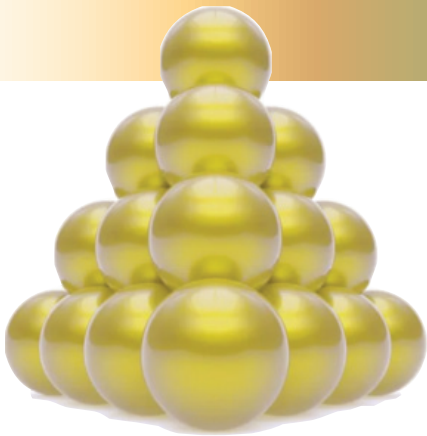

THE ANCIENT EGYPTIANS, DAVID HUDSON, ORMES (*Orbitally Rearranged Monoatomic Elements*), Manna, the Philosophers Stone, and more are pieces of what today is referred to as Alchemy.

For the open minded and those conscious to observe that there are more possibilities to living than simply what we are told through regulation, packaging, and media, the world of Alchemy is embracing and enhancing. *Outlandish concepts associated with Alchemy such as turning lead into gold are moving aside and making way for true research and development with great enthusiasm.* As skepticism is evolving into curiosity, the way of the future is being forged with Modern Alchemy.

What is alchemy? Why are the obscure symbols and arcane principles of this ancient craft getting so much attention in modern times? *How can the knowledge alchemists discovered and shared have such a strong influence in so many diverse contemporary areas as psychology, spirituality, the arts, literature, business, film making, gaming, and sciences like medicine and quantum physics?*

The answer to these questions lies in the universal nature of alchemical practices and operations. **Alchemy can be defined most simply as the “art of transformation.”** It is concerned with the underlying principles of how things change and the basic process of transforming one thing into another. ...

Always on the edge between science and religion, alchemy has applied methods

from both cultures to work with deeper realities that transcend the words and descriptions people have given them over time. In trying to penetrate the mysteries of matter and energy, the **alchemists discovered the very foundations of creation and being that is the common ground of all religions, sciences, philosophies, and psychologies.** ...

David Hudson at the International Forum on New Science [IFNS, 1995]

Material from halexandria.org/dward467.htm

Introduction: The story of Mr. Hudson’s efforts over the years is given in the form of a rough transcript of his presentation in 1995 at the ***International Forum on New Science** in Fort Collins, Colorado. As such, it serves as an excellent introduction to the study of the ORME, and its immense implications. His story and the profound revelations of his work are well worth considerable study. This is only the beginning introduction.

David Hudson (material throughout this segment quoted from above presentation):

“I was buying gold and silver as an inflation hedge. Then got into producing gold from a natural source, old mining sources. Mining worked well with the farming. You beat Uncle Sam as much as possible out of taxes, and at the same time accumulate as much wealth as you can. Leaching gold with cyanide process is like leaching salt out in the farming process. More of a hobby than a business – no intention of making money. But something I enjoyed very much. Did it for fun.

“In the process of recovering gold and silver, I began to recover something else, which was causing losses of the gold and silver. Eventually, it reached the point where the gold and silver would not recover at all because of the ‘something else’ [quotes added]. I then shut it down, to find out what the problem material was. I am not a physicist or a chemist and had no idea what the stuff was. It would recover and had a specific gravity; it would recover in the molten lead like it was gold and silver; it would flow out of the lead; but when I held the lead down [extracted it], I had “nothing.” [quotes added] *The mining community refers to this as “ghost gold,” a non-assayable, non-identifiable form of gold.*

“I then became involved with someone who does **emission spectroscopy (ES)** and became aware of work done by the **Soviet Academy of Sciences. When one does**

See “Gold and Alchemy,” cont. on pg 6

“Gold and Alchemy,” cont. from pg 5

ES, it involves taking a carbon electrode, placing your sample on the carbon electrode, and then running a second carbon electrode down above it, and striking an arc. When you strike the arc, the elements ionize and give off specific light frequencies. This is spectroscopic analysis. In the analysis, it’s done for 10-15 seconds before the electrode is burned away, and American spectroscopists claim that anything there will be ionized and read within those 15 [seconds].

“My sample was identified as Iron, Silicon, and Aluminum. I then spent three years in finding ways to take away all the Fe, Si, and Al. Then, I still had 98% of the sample of the material. On the arc, the material didn’t indicate to be anything. It was nothing. Back to Cornell University, where I worked with a PhD, who did X-Ray Analysis. This involved: Cumming Microscopy, Diffraction Microscopy, Fluorescent Microscopy, and five other wonderful technologies. The PhD said that it was Iron, Silicon, and Aluminum. Stayed there to remove it all. After that, the PhD said it was “pure nothing.”

“This wasn’t good enough for me. I could hold it in my hands, weigh it, perform chemistries with it – it was something. I then recalled that, according to the Soviet Academy of Sciences, the proper analytical tool is to burn the sample in the emission spectroscopic analysis for 300 seconds, not just 15.

“To do this, you have to sheath the electrode with an inert gas – keeping all the oxygen away from the DC arc. Otherwise, the carbon oxidizes, and the electrode falls apart. I set up to do this, using Argon gas to sheath the electrode – keeping the oxygen away. Because carbon is a very high-temperature material, it will then last for 300 seconds. When the material was placed on the electrode and the arc was struck, there was no reading at all for 15 seconds [other than “electronic grass” on the scope, as well as Iron, Silicon, Aluminum, and occasionally, traces of Calcium]. Then the material went quiet.

Finally, after 90 seconds, Palladium (Pd) began to read; after 110 seconds, Platinum (Pt) began to read; at 130 seconds, Ruthenium (Ru); at about 140-150 seconds, Rhodium; at 190 seconds, Iridium; at 220 seconds, Osmium began to read. The Russians call this fractional vaporization. For example, when one has water in an iron container, you can’t get the iron hotter than the boiling point of water as long as there is water present. This is the basis for cooling systems in engines, and why automobile engines don’t overheat, as long as there is water present. But once, the water is gone, the temperature rises very rapidly to the melting temperature of the iron.

[The temperature of any well-mixed solution undergoing a phase change will stay at the temperature of the phase change until the phase is completed. Also, the relevant boiling temperatures for the metals in the sample are:

- Calcium: 1420°C [Centigrade]
- Iron: 1535°C
- Silicon: 2355°C
- Aluminum: 2327°C ...
- Palladium: > [greater than] 2200°C
- Rhodium: 2500°C
- Ruthenium: 4150° C
- Platinum: 4300°C
- Iridium: > 4800°C
- Osmium: >5300°C.
- (Silver has a boiling point of 1950°C, while Gold’s boiling point is 2600°C.)

Essentially, all of the emissions from the elements were coming off in the sequence of

page 6

their increasing boiling temperatures. The maximum temperature of the DC arc is, theoretically, in the center of the arc, 5450 to 5500°C; while the sample was slightly away from the center. Thus, all the heat went into boiling off one element at a time, in the sequence of their boiling temperatures. They come off individually as if there is nothing else in the sample.

“I continued to run the sample for 2 and a half years, comparing it to standard samples. The amazing thing is that commercially available samples of the precious metals, when placed in the emission spectroscopic DC arc, read within 15 seconds. (And they assume they’re reading it all.)

“But then it goes quiet, until after 90 seconds, it starts to read again. About 85% of the reading occurs at the end. In effect, the people buying the commercially available samples and doing readings, are only doing about 15 to 20% of the sample. And they assume it’s everything. Short burn times don’t do the trick. They assume the standard, and yet this is not the correct standard.

“Keep in mind that the Soviet Academy of Sciences, the most prestigious scientific body in the Soviet Union and Johnson-Mathewe-Inglehart produce all the precious metals in the world. The mining activity of the best deposit in the world [is] in South Africa for six of these elements (Pd, Pt, Os, Ru, Ir, and Rh – i.e. no silver or gold) may yield only one-third of one ounce of the precious metals per ton of ore. They go a half mile down into the ground, following an 18-inch seam of material, to get 1/3 of 1 oz per ton of all the precious elements. No one else knows it’s there, and no one can analyze it. We, on the other hand, can derive and identify out of one ton of ore: 6-8 ounces of Palladium, 12-13 ounces of Platinum, 150 ounces of Osmium, 250 ounces of Ruthenium, 600 ounces of Iridium, and 1200 ounces of Rhodium!!

“This was then confirmed by a highly respected chemist and spectroscopy, including all of the colors of the solutions being correct, all the oxidation potentials were correct, ... Consider Rhodium. Rhodium produces a crimson, blood red colored salt. That is how it got its name, from the rose-colored salt, and the only element which produces this color. Very conspicuous. ...

“[In] the bowels of the earth, in the volcanoes, nature is producing monatomic gold. When it comes out, 98% of the gold coming out is monoatomic, 2% is metal... We have worked with the yellow gold, converting it, but always coming back to yellow gold. But when we get monatomic gold, it never goes back to yellow. And as monatomic gold, it is not metallic, has none of the metallic qualities of yellow gold.

“If you use thermo-gravimetric analysis, and you produce monatomic gold, you get sort of a gray-black, Hydrogen Auride (HAu). When you heat it, and the proton is annealed away, this is the same way you produce Amorphous Silicon (Silane to Amorphous Silicon). When you heat it, the proton is annealed away, it goes to a snow white powder! It loses 4/9th of its weight. If you take it back to metal, it regains the weight. As you kept annealing the material, it would levitate “taking the pan with it. In cooling, it would sometimes go to 2 or 300% of the weight. In heating, it goes to less than nothing.”

“This only happens in the white powder form. But mass has never left. Losing weight when cooling the material (approaching

absolute zero), and you have a superconductor. ... A superconductor is a material that has a single wavelength. ... ¶

The electrons going into the superconductor have to pair, with a time forward electron with a time reverse electron. When they pair, they become light. Any amount of light can exist in the superconductor. It doesn’t reside in any space-time. The only way to prove it’s a superconductor is to measure a Meissner* field. ... Superconductivity responds to magnetic fields. ...

*Meissner field definition from thoughtco.com /meissner-effect-2699258, contribution by Andrew Zimmerman Jones; updated Feb. 25, 2019 – The Meissner effect is a phenomenon in quantum physics in which a superconductor negates all magnetic fields inside of the superconducting material. It does this by creating small currents along the surface of the superconductor, which has the effect of canceling out all magnetic fields that would come in contact with the material. One of the most intriguing aspects of the Meissner effect is that it allows for a process that has come to be called quantum levitation.

Origin: The Meissner effect was discovered in 1933 by German physicists Walther Meissner and Robert Ochsenfeld. They were measuring the magnetic field intensity surrounding certain materials and found that, when the materials were cooled to the point that they became superconducting, the magnetic field intensity dropped to nearly zero.

The reason for this is that in a superconductor, electrons are able to flow with virtually no resistance. This makes it very easy for small currents to form on the surface of the material. When the magnetic field comes near to the surface, it causes the electrons to begin flowing. Small currents are then created on the surface of the material, and these currents have the effect of canceling out the magnetic field. ◇

“When [gold] goes to the white powder and loses 4/9th of its weight, it’s flowing light within it, in response to the earth’s magnetic field. And it flows so much current that it levitates 4/9th of its weight on the earth’s magnetic field. A human hand has sufficient amperage, that if you pass it under the sample, the material floats. It’s that sensitive to magnetic fields. All the eight precious metal elements can do this. Also Copper, Cobalt, and Nickel. So, I filed 11 patents.

“In 1990, my uncle showed me the Time-Life Book, ‘Secrets of the Alchemist.’ I was not interested in Alchemy; I wanted credibility in physics and chemistry. The book talks about a ‘white powder of gold’. The goal of the alchemist had been to make a “white powder of gold.” To make “the container of the light of life.” If you stand in its presence, you don’t age. If you partake of it, you live forever. I begrudgingly agreed to read the book.

“I have since read some 500 books on alchemy, alchemy history, and it all goes back to a man named Enoch. Thoth, Hermes, Trigemius. Same man. Ascended by partaking of the white drops. He never died, instead ascended because he was so perfect.

“I found a huge amount of research going on in treating cancer with precious elements. That the elements have been found interacting with a cell by a vibrational frequency or by a light transfer and have been correcting the DNA. Any alteration, any defect in the DNA is corrected by the precious elements. It perfects the cells of our bodies. But the element going into our bodies is not a metal, the element

is not a heavy metal, [it is a version of light]. So there’s no heavy metal poisoning. You can eat any amount of this white “flour,” [quotes added] and it doesn’t hurt you. If you eat it, it just goes through your digestive system. ...

“Since 1986, the top physicists in the world, at the Niels Bohr Institute, at Argonne National Laboratory, at Brookhaven ... have found that there is a group of elements in the center of the Periodic Table* that go through this strange state of existence. [Ed’s: Transition metals.] ...

“What they have found is that the [nuclei] of these elements were deformed, went to a ‘high spin state’ – what’s called high spin nuclei – and theoretically, these high spin nuclei should be superconductors because high spin nuclei pass energy from one atom to the next with no loss of energy.

“This is what is in our bodies. This is what flows the light of life. And when you understand that a superconductor flows a single wavelength of light, but, in fact, the light is a “null” [quotes added] light, two ways that are mirror images of each other. There’s no wave – it appears to cancel, but the null wave is in fact, while not measurable directly, is what produces the aura around our bodies. The aura is the Meissner field of superconductivity.

“In ancient Egypt, which I traced this back to, there’s a book, called The Egyptian Book of the Dead and the Papyrus of Ani, by Budge. This is the oldest book of the dead, from Old Kingdom Egypt. They found it, dating from about 3500 B.C.E., in the tomb of Pepi II. It says,

I am purified of all imperfections. What is it? I ascend like the golden hawk of Horus. What is it? I pass by the immortals without dying. What is it? I come before my father in Heaven. What is it?”

“It goes on and on and on. It keeps asking this question, ‘What is it?’

“The Hebrews worked in Egypt for many, many generations – they were the artisans and the metallurgists. When they left Egypt, Baalzelael, the goldsmith and Moses prepared the “bread of the presence of God” [quotes added]. He prepared the bread that the high priest partook of, the Melchizedek priest. The word in Hebrew that means “What is it?” is manna. The word, manna, literally translates, verbatim, into a question, “What is it?” If you don’t believe it, look in the Travels of Josephus. The very same words that were used in Old Kingdom Egypt, 3500 B.C. ...

“These elements are naturally in your body. It’s primarily Rhodium and Iridium. Now the Bible says that Moses told the Hebrew people,

You have not kept the covenant, and so the manna is being taken from you. But it will come back in the end times. When we will be a nation of high priests, not an elect high priesthood.

“This is the food, the light, you take in your body. ... If you ask a Rabbi, have you ever heard of the white powder of gold, he’ll say yes, we’ve heard of it, but to our knowledge, no one has known how to make it since the destruction of the First Temple – the temple of Solomon. This knowledge has been lost.

“But it wasn’t completely lost, the high priests when they left the temple when it was destroyed, went out on the desert and organized a commune called Qumran. They were the Essenes. In “The Dead Seas Scrolls Uncovered” [Eisement and Wise] this in ancient times, when the white powder was

“We can prove that **we do possess classified energy generation and anti-gravity propulsion systems** that are capable of **completely and permanently replacing all forms of currently used energy generation and transportation systems...**”
.....
“It is ridiculous – **obscene even** – that **mind-boggling poverty and famine exists in the world while we sit on classified technologies that could completely reverse this situation.**”

Material obtained from various sites. Excerpts reprinted as “fair use.” Abridged. Edited for brevity, clarity, and/or flow. Editor’s comments, etc., in square brackets. References omitted. Some modification.

Technology that Would Save the World in One Generation

© 2023 by Dr. Steven Greer, MD, sirius-disclosure.com (Jan. 19, 2023)
Material obtained from above site. Abridged, etc.

Dr. Greer discusses the methods of suppressed technology and methods used keep them away from the public...

- These suppression methods include:
- Black Shelving
 - National Security Orders
 - Patent Seizures
 - Financial entanglements with investors
 - Legal entanglements
 - Credible Threats to individuals and their families
 - Scientific Fraud
 - Media Corruption
 - Wetworks (Murder)

“Neither drilling more oil nor the current ‘green’ technologies can solve either the environmental or energy crisis. But the long-suppressed zero-point new energy technologies can solve both in one generation.”— Dr. Steven Greer

We have it in our power to change the world in a positive way, but we must act now! For more details about how New Energy will change the world, read Dr. Greer’s paper: “Implications for the environment, world peace and world poverty.”

Note: Material below from an earlier presentation by Dr. Greer about UFOs and technology that didn’t make it out of the black hole of criminally selfish interests.

March 2001.

The evidence and testimony presented in the following pages establishes the following:

- ◆ That we are being visited by advanced extraterrestrial civilizations and have been for some time;
- ◆ That this is the most classified, compartmented program within the US and many other countries;
- ◆ That those projects have, as warned in 1961 by Pres. Eisenhower*, escaped legal oversight and control in the US, the UK and elsewhere (* “Beware of the Military-Industrial-Complex...”);
- ◆ That advanced spacecraft of extraterrestrial origin, called extraterrestrial vehicles (ETVs) by some intelligence agencies, have been downed, retrieved and studied since at least the 1940s and possibly as early as the 1930s;
- ◆ That significant technological breakthroughs in energy generation and propulsion have

resulted from the study of these objects (and from related human innovations dating as far back as the time of Nikola Tesla) and that these technologies utilize a physics not requiring the burning of fossil fuels or ionizing radiation to generate vast amounts of energy;

- ◆ That classified, above top-secret projects possess fully operational anti-gravity propulsion devices and new energy generation systems if declassified and put to peaceful uses, would empower a new human civilization without want, poverty or environmental damage.

[Testimony of dozens of military and government witnesses exists which clearly establish these facts.] ...

Implications for the Environment

Editor’s note: Here is where we must free our imaginations and enjoy the clear, fresh air! One of the implications would be to totally invalidate the lame justification for “Project Sky Dim,” by “dimming the sun’s light to the earth, to curb climate change” caused in large part by burning fossil fuels. A lie, but most of what tumbles out of Washington DC mouths is false. AA MICHAEL, ET AL: WHEN CAN WE EXPECT THE NEW ENERGIES TO BE PUT INTO EFFECT? I’ll douse this question later and see what comes up.

[Classified energy generation and anti-gravity propulsion systems can completely and permanently replace all forms of energy generation and transportation systems currently in use... [instead zero-point energy state to produce vast amounts of energy without any pollution extracted from space/time all around us using unique electromagnetic circuits and configurations.] ...

They don’t ...

- ▲ require fuel to burn or atoms to split or fuse.
- ▲ require central power plants, transmission lines and the related multi-trillion dollar infrastructure required to electrify and power remote areas of India, China, Africa and Latin America.

These systems are site-specific: they can be set up at any place and generate needed energy. ... The environmental benefits includes:

- Elimination of oil, coal and gas as sources of energy generation;
- Elimination of air and water pollution related to the transport and use of these fuels. Oil spills, global warming, illnesses from air pollution, etc, also ended;
- Ending resource depletion and geo-political tensions arising from competition for fossil fuel resources;
- Ending energy-intensive technologies to scrub manufacturing pollution. replacing them with new clean, non-polluting industries;
- Recycling efforts will be able to reach full application since the energy needed to process solid waste will, again, be free and abundant.
- Agriculture can be transformed to use clean, non-polluting energy;
- Desertification can be reversed and world agriculture empowered by new energy desaliniza-

tion plants...

- Air travel, trucking and inter-city transportation systems will be replaced with new energy and propulsion technologies (anti-gravity systems allow for silent above surface movement) without pollution; costs decrease substantially; mass transportation in urban areas can use these systems to provide silent, efficient intra-city movement. [Ed’s: How about free mass transit as well?]
- Elimination of noise from jets, trucks and other modes of transportation.
- [Elimination of a layer of impenetrable state and local “government,” i.e., public utilities, and the corruption that goes with them. Each home, office and factory will have a device to generate whatever energy is needed. Ugly transmission lines that are subject to storm damage and power interruption will be a thing of the past.
- Elimination of underground gas pipelines, which rupture or leak and damage Earth and water resources.
- Nuclear power plants will be decommissioned and the technologies needed to clean such sites will be available. Classified technologies do exist to neutralize nuclear waste. ...

These technologies are real - I have seen them. ...

Implications for Society and World Poverty
The disclosure of these new technologies will give us a new, sustainable civilization. World poverty will be eliminated within our lifetimes. With the advent of these new energy and propulsion systems, no place on Earth will need to suffer from want. Even the deserts will bloom. ...

It is ridiculous – obscene even – that mind-boggling poverty and famine exists in the world while we sit on classified technologies that could completely reverse this situation. So why not release these technologies? [Well, those who control energy, wealth and exert their power don’t want this to happen.] ... Hence, the status quo.

Facilitating the Birth of a New Free Energy Age
An international effort to minimize disruption to the economy and to ease the transition to this new social and economic reality will be needed. We can do this and we must. Special interests in energy and economic sectors need to be reined in* ...

*Editor’s note: “They” won’t go peaceably, as they’ve shown time and again. They would rather create wars, climate and humanitarian disasters than do the right thing, grinning at the growing pile of skulls, laughing at our pain and suffering. We’ll have to be prepared for more “muscular” efforts and imposition of that legal tool, Receivership and what that should entail.

Dr. Greer appeals for “compassion” to deal with those who conspired to bleed the world dry (literally), then sacrifice its people, animals, plants, microbiota, rivers, oceans, forests, etc. I have to disagree. Is it “compassionate” to ignore 10 Billion victims (for the whole population of earth is victimized here)

and their cries for justice, but instead, try to soothe the nonexistent consciences of the gang of sociopaths, psychopaths, Dracos, Greys, and their human agents – less than 0.01% of the population, maybe slapping their hands for the Crimes Against Humanity and Crimes Against Nature? No. Stringent elimination of these causative agenst will be needed – for they WILL NOT COMPLY with “demands of conscience” (as I said, they don’t have any to appeal to – this would be a total waste of vital energy and time).

To my strategic mind, to save 10 Billion people, these villains are expendable. The human race itself and the planet itself IS NOT. As I said before, I save my compassion for the victims and the planet. If any of these villains truly develops a sense of their crimes and begins to feel remorse, then their might be hope for them. But punishment must still be imposed, though their karmic soul burden will be lighter.

The international community will need to put in place safeguards to prevent potential [wars and chaos imposed by the formerly powerful overlords, e.g., the US, UK, the EU, the CCP and those currently considered “leaders” in the community of nations.] ...

If we act now, by 2030* we will be able to effectively eliminate all poverty in the world, as we know it today. We only need the courage to accept these changes and the wisdom to steer humanity safely and peacefully into a new time. [*Ed’s: Recall that Dr. Greer wrote about this in 2001, so we don’t have much of that window of opportunity left.]

Implications for World Peace and Security

A few years ago I was discussing this subject with the former Chairman of the Senate Foreign Relations Committee, Sen. Claiborne Pell (deceased Jan. 1, 2009). He explained to me that he had been in Congress since the 1950s but had never been briefed on this subject. I told him that the nature of these black projects has resulted in most of our leaders being left out of any decision making on this subject... I said,

Senator Pell, all that time you were Chairman of Foreign Relations, you were deprived of the opportunity to deal with the ultimate foreign relations challenge and I pointed to the stars above our heads. He said, ‘You know Dr. Greer, I am afraid that you are right.’

It is true that our great diplomats and wise elders, such as Sen. Pell, Pres. Jimmy Carter and other international leaders have been specifically and deliberately prevented from having access to or control over this subject. ... Testimony, corroborated by multiple military witnesses who do not know each other ... will show that the US and other countries have engaged these ETVs in armed attack, in

“Why we fight,” cont. from pg 7

some cases leading to the downing of these vehicles. ... Having personally interviewed numerous credible military and aerospace officials with direct knowledge of such actions, I am certain that we have done this. *Why? Obviously, any civilization capable of routine interstellar travel could terminate our civilization in a nanosecond, if that was their intent. That we are still breathing the free air of Earth is abundant testimony to the non-hostile nature of these ET civilizations.*

We have also been informed that the so-called Star Wars (or National Missile Defense System)* effort has really been a cover for black project deployment of weapon systems to track, target and destroy ETVs [extraterrestrial vehicles] as they approach Earth or enter Earth’s atmosphere. [Even Wernher Von Braun who guided the US space program for years] warned on his death-bed of both the reality and the madness of such a scheme, apparently to no avail (see the *Testimony of Carol Rosin, former spokesperson for Wernher Von Braun*). ...

*Editor’s: Something pushed and advocated by mad scientist Edward Teller, “Father of the H-Bomb” and even more devastating weapons of mass destruction. ...

Every technology, unless guided by wisdom and a desire for that good and peaceful future – will be used for conflict. Super-secret projects* that answer to no legally constituted body – not the UN, not the US Congress, not the British Parliament – must not be allowed to continue to act in this way on behalf of humanity. [*Ed’s: Special Access forces largely dominated by Freemason-Illuminati.] [Testimony shows] that these ETVs became very prominent after we developed the first nuclear weapons and began to go into space. There were multiple events – corroborated here by numerous credible military officials – of these objects hovering over and even neutralizing ICBMs (Intercontinental Ballistic Missiles). ...

[What] if these ET civilizations were just saying, “Please do not destroy your beautiful world. And know this: we will not let you go into space with such madness and threaten others.”

*Editor’s note: Again, I reference a science fiction film, the 1951 classic: “The Day the Earth Stood Still,” a film that should be required viewing in our schools. *But humanities such as history and social studies just aren’t being taught in our schools any more, are they?* Anyway, Michael Rennie was the ET emissary, “Klatuu” who brings such a message to earth, along with take-him-seriously, “Gort.” (Actor Lock Martin was in the robot “Gort” suit.) A very effective sci-fi film with relatively few special effects, but very convincing. — To leave decisions of mega and planet death, war and death on a global scale in the hands of a un-elected, self-appointed clique* and their unaccountable covert operations is UNACCEPTABLE. ♦

Instead of Confrontation...

- ▶ Enforce an immediate ban on weapons in space and specifically ban the targeting of any extraterrestrial objects - such actions are unwarranted and could endanger humanity;
- ▶ Develop a special diplomatic unit to interface with extraterrestrial civilizations, foster communication and peaceful relations;
- ▶ [Create] international institutions that can ensure the peaceful use of those new technologies related to advanced energy and propulsion systems ...

To any thinking person, it is obvious that we must transition quickly to the use of these ... classified technologies. They are powerful

“We have ... been informed that the so-called Star Wars (or National Missile Defense System)* effort has really been a cover for black project deployment of weapon systems to track, target and destroy ETVs [extraterrestrial vehicles] as they approach Earth or enter Earth’s atmosphere. [The NYS] court found that the mandate was “arbitrary and capricious” as Covid-19 vaccines do not stop transmission, [destroying] any rational any rational basis for a mandate.” ...leaked documents from the military think tank RAND Corporation in Jan. of 2022, before Russia started the conflict in Ukraine, advised that a conflict in Ukraine would serve the purpose of cutting off Germany’s source of cheap energy from Russia, forcing them to purchase more energy from the US.” ...The use of a team of divers from Panama City was specifically done, according to Hersh, so that Biden could keep Congress in the dark about the fact that he was about to commit an act of war against our biggest NATO ally – and then blame it on Putin.

solutions already sitting on a shelf. ... We have the knowledge and means to ensure their safe and peaceful use NOW ... □

Aluminum Snow: Lab Test Confirms

© by Dane Wigington
Material from GeoengineeringWatch.org (Feb. 2, 2023)
ALUMINUM NANOPARTICLE FALL-OUT from climate engineering operations are building up in our snow, soils and runoff waters, the levels are far beyond alarming. Lab test results of snow from the side of N. California’s Mt. Shasta are a truly shocking example. Testing samples from this formerly pristine water source have revealed levels of aluminum that are so astronomically high that the meltwater can only be considered completely contaminated. [See video on this at Geoengineering Watch.org.] The testimony revealed ... is from a highly degreed former USFS [US Forest Service] government scientist. [A] wake-up call and warning for us all.

See THE DIMMING, the most comprehensive climate engineering documentary at geoengineeringwatch.org/geoengineering-watch-global-alert-news-january-28-2023... GeoengineeringWatch.org, PO Box 9, Bella Vista, CA 96008-0009.

NY Co-vax Mandate ‘Null e3 Void’

Material from childrenshealthdefense.org (Jan. 13, 2023, 7:39 PM)
CHD Defeats Co-vax Mandate in NYS

IN A GROUNDBREAKING DECISION FILED [IN] NY State... Supreme Court Judge Gerard Neri held that the Covid-19 vaccine mandate for healthcare workers is now “null, void, and of no effect.”

The court held that the NYS Dept. of Health lacked the authority to impose such a mandate as this power is reserved to the state legislature. Furthermore, the court found that the mandate was “arbitrary and capricious” as Covid-19 vaccines do not stop transmission, [destroying] any rational basis for a mandate. Children’s Health Defense (CHD) financed this lawsuit on behalf of Medical Professionals for Informed Consent and several individual healthcare workers.

Sujata Gibson, lead attorney, said, This is a huge win for New York healthcare workers, who have been deprived of their livelihoods for more than a year. This is also a huge win for all New Yorkers, who are facing dangerous and unprecedented healthcare worker shortages throughout New York State.

CHD President Mary Holland stated:

We are thrilled at this critical win against a Covid vaccine mandate, correctly finding that any such mandate at this stage, given current knowledge is arbitrary. We hope that this decision will continue the trend towards lifting these dangerous and unwarranted vaccine mandates throughout the country. ... □

Biden Guilty of Blowing up the Nord Stream Pipeline says Seymour Hersh

© 2023 by Brian Shilhavy, Editor, Health Impact News
Material from above site, healthimpactnews.com (Feb. 9, 2023). Abridged, etc.

85-YEAR-OLD JOURNALIST SEYMOUR HERSH, who used to write for the New York Times and is referred to by some as “the greatest journalist of our time,” and now publishes on Substack, just published what many are claiming is the “news story of the century.”

How America Took Out The Nord Stream Pipeline Seymour Hersh gained recognition in 1969 for exposing the My Lai Massacre and its cover-up during the Vietnam War, for which he received the 1970 Pulitzer Prize for International Reporting. – Hersh has conclusively shown how the US Government was responsible for blowing up the Nord Stream pipeline from Russia in a deliberate act of terrorism.

The corporate media has mostly tried to discredit Hersh by not treating this as a major story, with the exception of Tucker Carlson on Fox News, who of course blamed everything on Joe Biden and his Democratic administration. But ... Clayton and Natali Morris’s coverage of this yesterday on Redacted News [shows] video footage of many Republican members of Congress also calling for the closing down of the Russian Nord Stream pipeline, including US Republican Senator Ted Cruz from Texas, home of some of the largest Big Oil companies in the world who benefited from Germany’s loss of cheap Russian gas in 2022.

We reported last year how leaked documents from the military think tank RAND Corporation in Jan. of 2022, before Russia started the conflict in Ukraine, advised that a conflict in Ukraine would serve the purpose of cutting off Germany’s source of cheap energy from Russia, forcing them to purchase more energy from the US.

“SMOKING GUN! Alleged RAND Corporation Leaked Document Written BEFORE Ukraine War Shows US Planned the European Energy Crisis and Economic Collapse to Save the US Economy.”

And that is exactly what happened. ... [but] the true criminals are the Globalists who put these politicians into power, and reaped their greatest year of financial profit in American history ... □

More on the Nord Stream Pipeline Bombing

© 2023 League of Power, leagueofpower.com (Feb. 10, 2023)

Joe Biden Really Did Order the Bombing of Germany’s Nord Stream Pipeline

A TEAM OF US NAVY DIVERS FROM PANAMA CITY, FLORIDA snuck off to Europe many months ago to plant bombs on Germany’s Nord Stream Pipeline at the bottom of the Baltic Sea. This was done under a direct order from Joe Biden, and then the pipeline bombs were detonated on Biden’s orders a few months later.

The plan to blow up Germany’s main natural gas pipeline was hatched by the Biden regime months before NATO provoked Russia into invading Ukraine.

AND Biden did this in secret, behind the backs of the US Congress. We know all of this thanks to a new investigative report from longtime journalist Seymour Hersh.

Sy Hersh is not some right-winger. He used to work for the New York Times. He’s 85 years old now, and he’s had a storied career as a journalist. Hersh won his first major award in 1969, for reporting the My Lai massacre story in Vietnam. He’s been equally critical of both Republican and Democrat administrations when it comes to neocon warmongering.

Writing on his Substack page, Hersh goes into painstaking detail to describe how Joe Biden and his underlings carried out the attack on the main gas pipeline of our allies in Germany...

Hersh reports that Biden opted to use a team of Navy divers from Panama City to bomb the pipeline, specifically to keep from having to alert Congress to what he was doing. Even though presidential administrations have been ignoring the Constitution for quite a few years, only Congress can declare war on foreign countries.

The Navy SEALs and other special ops teams are required to brief the Gang of 8 in Congress before carrying out a mission like this. The Gang of 8 are the top Republican and Democrat in the House and Senate, plus the ranking GOP and Democrat Members on the House and Senate Intelligence Committees. ...

The use of a team of divers from Panama City was specifically done, according to Hersh, so that Biden could keep Congress in the dark about the fact that he was about to commit an act of war against our biggest NATO ally – and then blame it on Putin.

Hersh has specific details about every step of the planning of this operation over a nine-month period, from a person with direct personal knowledge of all of it. That’s abundantly clear from his report [and the treacherous secrecy in the months-long planning to obscure the true culprits.]

Jake Sullivan ... Biden’s National Security Advisor, led the meetings. Also present at the planning was a group of men and women who worked for the Joint Chiefs, the CIA, the State Department and the Treasury Department.

As Hersh reports:

What became clear to participants, according to the source with direct knowledge of the process, is that Sullivan intended for the group to come up with a plan for the destruction of the two Nord Stream pipelines– and that he was delivering on the desires of the President.

See “Why we (have to) fight,” cont. on pg. 9

“Why we (have to) fight,” cont from pg. 9

If in fact the government and the corporations they collaborate with can engage in censorship and propaganda nonstop, and there are no alternative voices, democracy is dead. [Ed’s: A *de facto* fascist state.]

Charlene Bollinger:

This lawsuit is about preserving our free speech rights as Americans and holding those involved in violating antitrust laws accountable, like the TNI.

My husband and I remain steadfast in our commitment to highlighting the well-documented risks of Covid-19 vaccines and the myriad of dangers to those who are not informed by their healthcare providers of the side effects of harsh pharmaceutical treatments for life-threatening illnesses.

Mercola on collusion between government agencies, Big Media and Big Tech:

Platforms partner with the alphabet soup of federal agencies to censor speech. Those same platforms and legacy media outlets conspire to boycott stories that don’t fit an official narrative about COVID and many other topics. — Our nation’s founding fathers would be appalled and resolute in defense of maintaining an informed citizenry. ...

Lawsuit contends:

TNI’s Big Tech members – Facebook, Google, Twitter, and Microsoft – are first and foremost Internet companies, each of which is, owns or controls one or more behemoth Internet platforms, including social media platforms and search engines.

Core partners of the Trusted News Initiative include:

The Associated Press, Agence France Presse, the BBC, CBC/Radio-Canada, the European Broadcasting Union (EBU), the Financial Times, First Draft, Google/YouTube, The Hindu, The Nation Media Group, Meta, Microsoft, Reuters, the Reuters Institute for the Study of Journalism, Twitter and The Washington Post.

The lawsuit’s executive summary states:

The TNI exists to, in its own words, ‘choke off’ and ‘stamp out’ online news reporting that the TNI or any of its members peremptorily deems ‘misinformation.’

TNI members have targeted and suppressed completely accurate online reporting by non-mainstream news publishers concerning both Covid-19 (*on matters including treatments, immunity, lab leak, vax injury, and lockdowns/mandates*) and US elections (*such as the Hunter Biden laptop story*).” ...

“[This] is an antitrust action,” and specifically, “Federal antitrust law has its own name for this kind of ‘industry partnership’: it’s called a ‘group boycott’ and is a *per se* violation of the Sherman Act.”

Legal precedent holds that a “group boycott” is “a concerted attempt by a group of competitors” to “disadvantage [other] competitors” by “cutting off access” to a “facility or market necessary to enable the boycotted firm[s] to compete.”

As evidence of this allegation, the lawsuit references multiple public statements by TNI partners, including a March 2022 statement by Jamie Angus, then-senior news controller for BBC News, who explained TNI’s “strategy to beat disinformation”: ...

The existential threat I think is that overall breakdown in trust, so that trusted news organizations lose in the long term if audiences just abandon the idea of a relationship of trust with news organizations. So actually we’ve got a lot more to hold us together than we have to work in competition with one another. ...

Angus has since left the BBC to take a position with Saudi Arabia’s state-owned television broadcaster, according to the law-suit. ...

page 10

tion with Saudi Arabia’s state-owned television broadcaster, according to the law-suit. ...

Plaintiffs are online news publishers who, as a result of the TNI’s group boycott, have been censored, de-monetized, demoted, throttled, shadow-banned, and/or excluded entirely from platforms like Facebook, YouTube, Twitter and Instagram. ...

The Plaintiffs referenced Supreme Court precedent – specifically, a 1945 ruling involving the AP – to support their First Amendment claims against TNI, noting that ... First Amendment violations do not exclusively refer to the censorship of speech by the government. – [In the 1945 case, Associated Press v. United States, a news industry partnership (the AP) “prevented non-members from publishing certain stories.” ... The Supreme Court sided with the plaintiffs. – In the majority opinion, Justice Felix Frankfurter wrote that the First Amendment:

[Rests] on the assumption that the widest possible dissemination of information from diverse and antagonistic sources is essential to the welfare of the public, that a free press is a condition of a free society.

Surely a command that the government itself shall not impede the free flow of ideas does not afford nongovernmental combinations a refuge if they impose restraints upon that constitutionally guaranteed freedom.

Freedom to publish means freedom for all, and not for some. Freedom to publish is guaranteed by the Constitution, but freedom to combine to keep others from publishing is not. Freedom of the press from governmental interference under the First Amendment does not sanction repression of that freedom by private interests.

Holland commented on the significance of the Supreme Court precedent, telling The Defender:

The lawsuit is resting on a really strong Supreme Court precedent that basically says whether it is government censorship or it is collusive anti-competitive illegal suppression by the private sector, it’s illegal. ...

Noting the enormous market share held by Big Tech firms such as Facebook, Google, Microsoft and Twitter, the lawsuit states,

The TNI’s Big Tech members are ‘platform gatekeepers’ in the online news market, with the power to cripple or destroy publishers by excluding them from their platforms. – TNI’s legacy news partners took advantage of their cooperation with each other and with Big Tech, to “choke off” inconvenient narratives, the plaintiffs allege. ...

TNI members agreed in early 2020 that their ‘ground-breaking collaboration’ would target online news relating to COVID-19 and that TNI members would ‘work together to ensure [that] harmful disinformation myths are stopped in their tracks” and “jointly [combat] fraud and misinformation about the virus. ...

The lawsuit also alleges TNI members often knowingly removed or otherwise blocked content they knew was not false [i.e., TRUE]. ...

Twitter Files divulge how Mercola was de-platformed The lawsuit notes that the recently released “Twitter files” provide further indication of such inter-firm communication and coordination, including “regular meetings” and “standing weekly call[s]” to “discuss censorship policies and decisions.” [According to the lawsuit, YouTube de-platformed Mercola on Sept. 29, 2021. Mercola learned about this action via a Washington Post article published that morning...]

In the lawsuit, all plaintiffs allege similar coordinated efforts at censoring their

[Referencing a 1945 court anti-trust case, the Associated Press vs the US], “Justice Felix Frankfurter wrote that the First Amendment... [rests] on the assumption that the widest possible dissemination of information from diverse and antagonistic sources is essential to the welfare of the public, that a free press is a condition of a free society.”

Gerard Rennick, Australian Senator for Queensland: “... more than half the country [Australia] caught COVID despite the fact that 20 million out of Australia’s total population of 26 million got their COVID jabs.”

content and their social media accounts and subsequent financial damages due to being de-platformed and sustaining significant reductions to their audience size. ...

[The] lawsuit alleges that online payment platforms and processors such as PayPal and Stripe banned multiple plaintiffs, including CHD and Creative Destruction Media...

As summarized by Holland, TNI acts as “a global media monopoly”:

They couch what they’re doing, their conspiracy to suppress independent media, i.e. the voices of dissent about election information and COVID information, as a ‘need to preserve the trust of the people’ and ‘upgrade the trust.’ By censoring independent voices, what they’re doing is economic suppression. Antitrust is against trusts, it’s against monopolies, and what the TNI has done is essentially create a global media monopoly ... □

Illinois Workers Awarded \$500M for Unlawful Termination per Vax Mandate

© 2022 by Zachary Stieber, The Epoch Times

Material obtained from childrenshealthdefense.org (Dec. 20, 2022). Originally published by theepochtimes.com.

500 Fired Healthcare Workers Get \$10 Million Settlement Over Vaccine Mandate

A US JUDGE APPROVED A MULTIMILLION-DOLLAR SETTLEMENT FOR WORKERS who were fired by an Illinois healthcare system for refusing to get a Covid-19 vaccine.

A US judge approved a multimillion-dollar settlement on Dec. 19 ... About 500 workers who were terminated or, after seeing their exemption requests denied, got a COVID-19 vaccine, will receive compensation as part of the \$10.3 million settlement, a preliminary version of which was first announced in July.

US District Judge John Kness, a Trump appointee overseeing the lawsuit brought by the workers, issued verbal approval for the settlement during a hearing, lawyers for Liberty Counsel and NorthShore University Health system said. Kness plans to release a written judgment in the next week. ...

Harry Mihet, vice president of legal affairs for Liberty Counsel, said in a statement that the group was ...

Pleased to finally get the court’s final approval of this classwide settlement for these health care workers who were unlawfully discriminated against and denied religious exemptions from the Covid shot mandate.

This case should set a precedent for other employers who have violated the law by denying religious exemptions for their employees.

Liberty Counsel, a legal group that brings cases of alleged religious discrimination, was representing the 13 named plaintiffs in the case. The group successfully won class certification for all workers who were denied religious exemptions ...

That Illegal Vax-Mandate Like many healthcare systems, NorthShore imposed a vaccine mandate on employees in 2021.

NorthShore told workers that they could file a request for a religious exemption using a form that said the worker in question needed to provide “a description of my sincerely held religious principle or practice that guides my objection to receiving the required vaccination.” Northshore explicitly instructed applicants to not fill out lengthy answers. ...

Officials said the employees failed to meet the standard for religious exemptions. ... NorthShore said that any religious objections based on “aborted fetal cell lines, stem cells, tissue, or derivative materials” would result in denials because those products were “not in NorthShore administered vaccines.” [However], all of the Covid-19 vaccines available in the US have links to aborted fetal cell lines. ...

Instead of engaging Plaintiffs in good faith, NorthShore denied Plaintiffs’ religious exemption requests en masse, providing nothing more than copy and paste responses, informing them that they lacked ‘evidence-based criteria,’ whatever that means... By failing to engage any of the Plaintiffs and its numerous employees with religious objections in good faith ...

The plaintiffs said the treatment violated the Civil Rights Act, which requires employers to treat workers similarly, and the Illinois Health Care Right of Conscience Act, which forbids discrimination on the basis of “right of conscience.” ... □

Australian Senator Takes Hard Stand Against COVID Jabs

2022 Analysis by Dr. Joseph Mercola Fact Checked (Dec. 29, 2022)

THE CANADIAN INDEPENDENT video features an early-December 2022 Parliamentary speech by Gerard Rennick, senator for Queensland, Australia, and a member of the Liberal National Party.

As noted by Rennick, Australia had logged more than 10 million Covid cases by Sep. 2022, at which point the Australian Health Department stopped counting – a decision made out of embarrassment, Rennick suggests, seeing how more than half the country caught COVID despite the fact that 20 million out of Australia’s total population of 26 million got their COVID jabs.

Rennick goes on to highlight the rising excess death rate. In 2021, Australia had 8,706 extra deaths above norm, even though New South Wales remained in lockdown for three whole months. “In theory, the deaths should have been lower, like they were in 2020,” Rennick says.

When Will COVID Jab Injuries Be Addressed? Then there are the jab injuries, which

A Tale of Two Bunnies, Part 1

© by Michael J. Waddlington
Reprinted with author's permission. In serial form. Art by R. A. Jenkins.

Foreword—
Long ago, or perhaps not that long ago, in a sparkling Bunny village well-hidden from the ordinary world, lived bunnies-a-plenty. With plenty of clover and other good nibbly greens, flowers, and

wonderful bunny trees, it was as good as good can be. All was peaceful. Then.
But sometimes even contented bunnies get the urge to peer at different skies and other horizons, upon new and different fields. And so it was when the Two Bunnies in this tale went on "walk-about."
For the record, Little Bunny was a pretty bunny with fluffy, dark tufts, a bouncy little tail and beautiful, doe-like eyes. Muffwin was a sturdy red-brown bunny with a small but perky tail, good pink ears, and round, eager eyes.

Little Bunny and Muffwin: Beginning of the Picnic that went far afield-

Muffwin heard all the commotion even before he trundled over Big Hill. All the good birds and butterflies didn't seem to mind,

bunnies hopped over to the good bunny kitchen. Little Bunny always kept fresh bunny apple juice and good nuts in the cool, leafy hutch kitchen.
I'll put some good nourishing Dandy Yeast in our juice. Muffwin, since we're both tired and frizzled!" Little Bunny said, her little bunny ears eagerly waving about, awaiting the nourishing snack.

"You've done a good, hard job, Little Bunny. You should relax now before you get all out of control!" Muffwin advised. He knew Little Bunny was a tough Bopping Bunny, too, and Muffwin had been bopped enough to know better than to get in Little Bunny's way when she was doing her hutch cleaning.
"Okay, Muffwin," replied Little Bunny, giving a sigh of relief (if truth be told), for she was clearly tired of all that cleaning, and dusty, too. "Let's trundle off to the Bunny Field!"

Muffwin was very surprised, however at this quick agreement for a bit of rest. Little Bunny was usually very tough to convince when there was a project to pursue. But, they began putting together a few treats for an impromptu picnic, both clearly delighted for a bit of fresh air.

After packing some good healthy bunny snacks, the two bunnies hopped off. It was a good, nice day, with the warm sun splashing over the cool, green grass, and the friendly animals playing merry games. Muffwin and Little Bunny hoped and trundled for a long time, all the way from forest to open field, and

ARIES (MAR 20 – APR 19)
Early March reflect upon your spiritual gifts. The Saturn shift of March 7th (and for the next 2-3 years) helps you to work through new challenges. The spring equinox offers you an opportunity to set personal goals coming from a place of confidence. Pluto's shift into Aquarius on the 23rd points to ways to integrate yourself in the world as a spiritual warrior. Embrace the dynamic energies of the solar eclipse on April 20th, and consider ways to meet your personal goals. Be bold and courageous. The last week of the month look for opportunities which reflect true integrity.

TAURUS (APR 20 – MAY 20)
From March 1st through the 20th get together with others. By connecting with like-minded friends, you feel more secure. Saturn in Pisces will support your social discernment; certain friends will likely leave your life as new ones appear. The heavy Aries emphasis this year inspires you to take a deep dive into your inner self, with pivotal dates being March 21st and April 20th. Late March through April 19th practice your favorite forms of spiritual disciplines. You will be able to step into your personal power after April 19th.

GEMINI (MAY 21 – JUN 20)
As March begins, you desire to jump on the career bandwagon and embrace new challenges with greater confidence. With the Saturn shift on March 7th, new career doors for you over the next three years. Meanwhile, from late March through April 19th your focus is on connecting with friends. The new moon of March 21st, and the eclipse of April 20th are pivotal days to expand your network. April ends with you clamoring for alone time; a perfect time for a mini vacation or just R&R.

CANCER (JUN 21 – JUL 22)
March opens the door to new horizons, travel or new learning. The impulse to expand your knowledge base is part of the Saturn shift which continues for the next three years. From March 19th through April 18th rise to a new level of competence and authority at work. New challenges emerge as spring begins. Competing stresses between work and home get resolved after the solar eclipse of April 20th. As April ends you feel like reconnecting with your old friends, and adventurous enough to make new ones.

LEO (JUL 23 – AUG 22)
From March 1st through the 19th is your time of the year for exploring true intimacy. Once spring arrives, life lightens-up for you as your restlessness can best be applied to exploring new adventures, travel or learning. The new two moons in Aries, March 21st and April 20th are launch dates, maybe publish that book you've been working on. From March 19th through April 18th be fearless in communicating your inner truth; others' will respect your candor. As April ends package all your new insight and apply it in some way to your career path.

VIRGO (AUG 23 – SEPT 20)
March focuses on vital relationships as your ability to connect with your partner is magnified. Healing of all relationships past and present can be achieved. The double new moon in Aries on March 21st, and April 20 signal times to clean up relationship debris and psychic clutter. Information is revealed which will assist you in reaching relationship and financial goals. The peace and stability you seek begins to manifest as April ends.

LIBRA (SEP 21 – OCT 20)
From March 1st through March 19th tackle health improvements (e.g., exercise, diet, mindfulness). Saturn moving into Pisces provides impetus here. You make changes in work reflecting more realistic goals. Harness the energy of the new moon on March 21st to balance relationships. A breakthrough with partners occurs around the April 20th solar eclipse. Pluto in Aquarius late March through June 10th will bolster your creativity. Overall, April is a positive month for you to focus on relationships that matter.

SCORPIO (OCT 21 – NOV 20)
March favors creativity, fun and romance. This year thanks to Saturn's transit urging discipline and planning, you'll be more serious about manifesting your creativity. Meanwhile, your intuition is spot on! Use both new moons in Aries, March 21st and April 20th to initiate a more disciplined self-care routine. See what dreams unfold with the full moon on April 5th. As April ends, questions about the partner you seek begin to be answered.

SAGITTARIUS (NOV 21 – DEC 20)
In March you'll want to find comfort at home and connect with family. With Saturn's 3-year transit of that sector, you'll probably have to make home improvements. The new moon of March 21st inspires you to make an action plan for fun and creativity, which becomes turbo charged at the solar eclipse of April 20th. Expect some "wows"! Late March through April 18th fire up your creativity. A project which gives your joy can be launched now with its fulfillment in the fall. As the month ends your desire to eat smarter and exercise more effectively gets a boost..

CAPRICORN (DEC 21 – JAN 19)
From March 1st through the 19th your focus is on managing daily activities in a more effective way. The planet of time, Saturn, highlights your style of time management in a more efficient way. The new moon of March 21st assists you in prioritizing your goals. Communications related to healing family tensions flow with greater ease after April 20th. Overall, April is a good month for you to clean out clutter from the home and attempt a thorough spring cleaning in every way.

AQUARIUS (JAN 20 – FEB 18)
March is a good month for you to review income (and expenses). Meanwhile Saturn in your money sector will incline you to redo your financial habits during the Saturn transit (through 2026). Use the energy of March and April to ground your "improved self" with greater confidence. The double new moons of March 21st and April 20th will help you focus your thinking and speaking patters. Be bold in communicating your truth. Late April is your time to spruce up the home.

PISCES (FEB 19 – MAR 21)
As March begins the addition of the taskmaster, Saturn in your sign (until 2026) represents a new era in your life. Embrace duty and responsibility with authority and confidence. As March unfolds into April look at ways to avoid unnecessary expenses and ways to improve your income. March 21st and April 20th new moon energies tug at your need to seek more value in your life, and more income. Answers will be more clearly discerned after the full moon of April 5th. Late April is your time to exchange views with siblings, take short trips. ■

“I had the privilege of observing and photographing this magnificent wall of plasma on March 9th,” says **photographer Eduardo Schabberger Poupeau** of **Rafaela, Argentina**. “It rose some 100,000 km [about 62,137 miles] above the solar surface. On my computer screen it looked like hundreds of threads of plasma were dripping down a wall. It really was a spectacle that left me speechless.”

These structures have been seen on

the sun many times before. They frequently appear in rings around the sun’s poles, and are called “polar crown prominences.” Researchers still don’t fully understand them.

Mysteriously, the “plasma threads” Poupeau saw plummet faster than ambient magnetic forces seem to allow. Nuclear engineers would like to figure out how this happens, because it also happens on a smaller scale in fusion reactors on Earth, frustrating their efforts to sustain an energy-producing reaction. Studies of these prominences could lead to practical breakthroughs. [The plasma was still falling as of Mar. 11, 2023.] ■

More from spaceweather.com: This image, taken in false color to emphasize the spots, was compiled by Spanish amateur astronomer, *Patricio Leon Manchac*. It compares solar photos taken in 2021 (left side), vs 2022 (right) then superimposed. The interesting banding of the spots, and what must be an electromagnetic activity at those solar latitudes, could stand more explanation, as do the blank areas. But not in this issue. Meanwhile, I’d say that Sun cycle # 25 is kicking up. ◇

“Northern lights,” by *Alexandre Croisier*, [instagram.com/alexandr_ecroisier](https://www.instagram.com/alexandr_ecroisier). Taken Feb. 27, 2023 at Mont Saint-Michel, Normandie, France. Features red auroras being pierced by Archangel Michael’s light sword (so it appeared to me). Based on a couple of hints the photographer made, this image may have been modified to bring out the reds. But, it’s a remarkable image of a low-dipping aurora in any case. ◇

“Tale of Two Bunnies, Pt 1” cont. from pg. 14

stopped on a soft mossy patch. (Bunnies know when to stop for a restful snack!, and Muffwin and Little Bunny knew this was the right time.) Together, they prepared the good yeast milk and nutritious bunny gorp (*which was different kinds of seeds, nuts, raisins and dried flower heads*) for lunch.

“I’ll make some extra gorp and yeast milk, Muffwin, just to be safe!,” said Little Bunny happily.

“Safe from what, Little Bunny?,” asked Muffwin.

“O, Muffwin, you silbun!* The great big Bison Bunnies often trundle right

here! They are wild, strong bunnies ‘wif powerful ears and mighty tufts! I know all about them, and they all trundle together in a big herd, and hop right up to bunnies who come here. They are friendly, though, if little forest bunnies like us bring them good bun-treats!,” Little Bunny explained. (*An affectionate term; a contraction of “silly” and “bun.”)

“I’d like to meet them, Little Bunny! I would give them good gorp ‘wif yeast and be real friendly!,” Muffwin replied, his happy bunny ears all excited from Little Bunny’s description. He liked meeting bunnies from other parts of Bunnyland, and the Bison Bunnies sounded like nice bunnies! Meanwhile, the two bunnies made quick work of the

gorp-making and yeast-milk stirring, and sat down to eat.

“Yeastmilk, yeastmilk, YaY! the bunnies exclaimed happily, hopping up and down.

As if it needed to be said, yeastmilk was Muffwin’s favorite snack. It was very nutty and tasty, especially out in the great bunny field. The bunnies drank quickly, and finished their good gorp. Soon, the two hoppers are all full, and then they slowly trundled off through the thick grasses. But it was still a long trundle to the great Bunny Plain, where the Bison Bunnies roam in great fluffy dark herds. ■

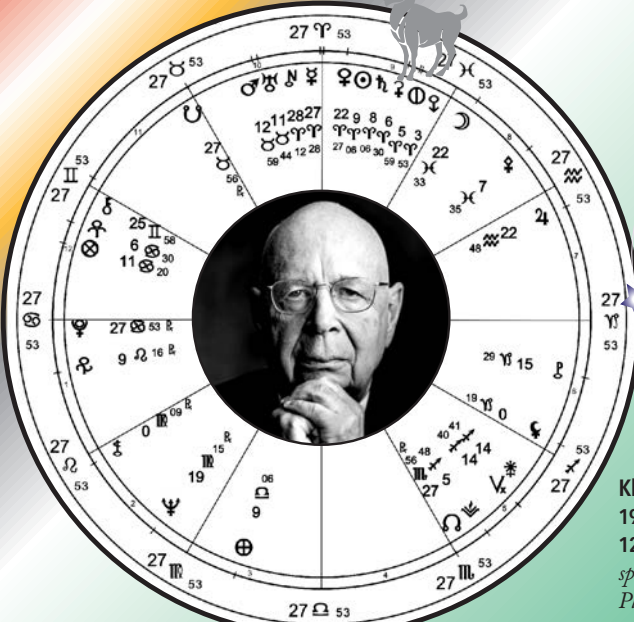

[Next up: Little Bunny and Muffwin meet the Bison Bunnies!]

Controlling others thru algorithms vs Seeking the Center of Life

Klaus Schwab & Vincent Van Gogh

Klaus Schwab, b. Mar. 30, 1938, Ravensburg, Germany, 12:14:49* PM (*Time unk.; speculative time putting Pluto in Cancer on the Asc.)

Vincent van Gogh, b. Mar. 30, 1853, 11 am LMT (d: Jul. 29, 1890) Zundert, Netherlands

Guru of a post-human world where compliance with shared goals is compulsory for “our own good.”

Artist searching for the center, directed by the Muse (la belle dame sans merci).

Some Quotes by Klaus Schwab
Material from [brainyquote.com](#)

“...acute crises contribute to boosting the power of the state... and there is no reason why it should be different with the COVID-19 pandemic.

“We must address, individually and collectively, moral and ethical issues raised by ... artificial intelligence and biotechnology, which will enable significant life extension, designer babies, and memory extraction.”

“New technologies and approaches are merging the physical, digital, and biological worlds in ways that will fundamentally transform humankind. ...”

“We are ... living in a completely digitalized [and] completely globalized world, so we have to find some new mechanisms and values to deal with this post-digitalized and post-globalized world.”

Klaus Schwab, briefly
Material obtained from various sites. Excerpts reprinted as “fair use.” Abridged. Edited for brevity, clarity, and/or flow. Editor’s comments, etc., in square brackets. References omitted. Note: My “Quick Read” is on pg 18.

Some background
Material from [astrotheme.com/astrology/Klaus_Schwab](#)

Klaus Martin Schwab is a German engineer, economist and founder of the World Economic Forum (WEF). He has acted as the WEF’s chairman since founding the organization in 1971.

[He] was born to Eugen Wilhelm Schwab and Erika Epprecht in Ravensburg. His parents had moved from Switzerland to Germany during the Third Reich in order for his father to assume the role of director at Escher Wyss AG, an industrial company and contractor for then Nazi Germany. Schwab’s family was monitored by the Gestapo, which in 1944 also interrogated his mother (who was from Zürich) for speaking with a Swiss accent in public.

Schwab was raised Catholic [and] is a citizen of Germany although he has three Swiss grandparents and two Swiss brothers.

Career Schwab was professor of business policy at the University of Geneva from 1972 to 2003, and since then has been an Honorary Professor there. Since 1979, he has published the Global Competitiveness Report, an annual report assessing the potential for increasing productivity and economic growth of countries around the

world, written by a team of economists.

A bit more background...
Material obtained from [vanityfair.com/news/2009/01/getting-to-know-klaus-schwab-the-man-behind-davos](#)

BY AGE 27, GERMAN-BORN KLAUS SCHWAB HAD FIVE DEGREES IN MECHANICAL ENGINEERING AND ECONOMICS. At 31, he became the youngest professor in Switzerland. At 33, he founded the World Economic Forum, in 1971...

Editor’s comment:

In this issue there are disturbing scenarios that are pouring out of the gang that goes to Davos, Switzerland to plot how to impose a single-minded world view that would eventually supercede every human cultural institution. Been going on pretty much unheard of by ordinary citizens for 50 years. But let’s take a deeper look at Mr. Schwab.

Ideologue and Engineer First, Schwab is an ideologue and an engineer. That’s not usually a sign that “something is wrong,” except when the engineer starts to toy with social control, trying to “fix it” so that it behaves more logically than it seems to be doing at present.

“What’s wrong with that?,” you may ask. Well, I have to send readers to the movies or science fiction books to find the answer to that naive question. Just consider how many villains in these stories

Some Quotes by Vincent van Gogh
Material from [azquotes.com](#)

“Great things do not just happen by impulse, but as a succession of small things linked together.”

“I am seeking, I am striving, I am in it with all my heart.”

“Art is to console those who are broken by life.”

“Normality is a paved road: It’s comfortable to walk, but no flowers grow on it.”

“If one truly loves nature one finds beauty everywhere.”

“Your profession is not what brings home your weekly paycheck, your profession is what you’re put here on earth to do, with such passion and such intensity that it becomes spiritual in calling.”

Editor’s foreword: Van Gogh shares the same month and day as Klaus Schwab. Talk about contrast!! Always interesting, I think to study “twins,” so to speak. Here’s Vincent, totally involved with his inner world, and there’s Schwab pretty much devoted to controlling everyone else. ♡

Vincent van Gogh
Material from [astro.com](#). Reprinted as “fair use.” Abridged. Edited for brevity, clarity and/or flow. References omitted.

DUTCH ARTIST, A LEGEND FOR HIS BRILLIANT WORK, lived his brief life in misery and poverty. Disappointed in love and religion, he was intense, difficult and unhappy. He seemed to lack a psychological shield to protect him from the pain of everything, every moment.

[Failed] as a preacher to impoverished coal miners, van Gogh turned to full time art when he was 27. In 1886 he went to Paris to immerse himself in the avant guard styles of the day. He began using the impressionist’s choppy brush strokes of pastel color. Within two years, he was disillusioned by what he saw in the Parisian scene, and living with his brother Theodorus [Theo], upon whom he was financially dependent, proved to be a strain for both of them. He fled south to Arles. Intoxicated by the countryside, he painted with thicker impastos in blazing yellows, piercing reds and icy greens. [Still not statisfied] he was frequently in despair.

On 14 October 1889, Vincent went quite mad to where he was considered dangerous.* [See Editor’s postscript following.] He was put in an asylum near Paris on Jan. 25, 1890. His doctor encouraged him to keep painting. [Flying] into a cre-

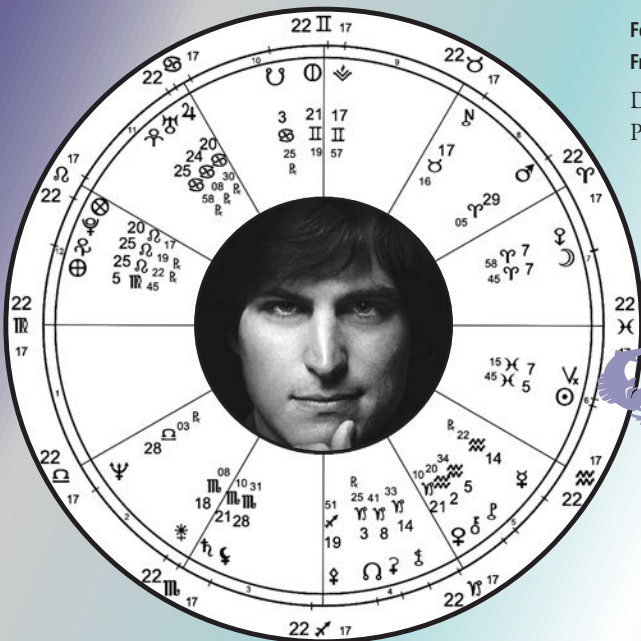

ative frenzy, van Gogh completed 70 canvases in 70 days. Six months later, on July 27, while painting in a wheat field, he became suddenly, intolerably despondent and shot himself in the chest. He died two days later on the 29th at 1:30 am in Auvers-sur-Oise near Paris. — At the time of his death he ... had sold only two paintings in his lifetime, an artist who was later known as one of the most famous painters of all time. Two years after his death, a Dutch museum gave him a retrospective. His story first became the basis for a novel in 1907. Irving Stone’s “Lust For Life” came out in 1934 and was made into a movie in 1956. In 1987, a collector paid close to \$54 million for his “Irises,” now in the Getty Museum in Los Angeles. ■

***Editor’s postscript**

Alas, people often do suffer for their art. Not only was Vincent predisposed to the psychological torments he told us about (in letters to his brother Theo), but his beloved impastos – of lead white (a systemic and neurological toxin) vermilion (a form of mercury), and that lovely emerald green (an arsenical compound) no doubt added to the despondency he experienced. And absinth (wormwood and herbs), the “Green Fairy” beloved by poets, courtesans and roués was known for inducing phantasmagorical visions... And being poor, not very good food. Perhaps, that’s why artists over the centuries had a reputation for being “mad.” Yes, the pursuit of artistic vision has its share of victims, but the products of their “madness” find many posthumous admirers, champions (and psychologists). ❖

Imagineering to Serve Humanity vs Antihumanism that Devours Humanity
Steve Jobs & Yuval Noah Harari

Feb. 24, 1955, 7:15 pm, San Francisco, Calif. (d. Oct. 5, 2011)
Driven to excellence. Got there. Persevering, obsessive.

Yuval N. Harari
B. Feb. 24, 1976, time unk, using noon, Kiryat Ata Israel. WEF proponent, looks at “virtual” humanity through a glass darkly.

Co-founded Apple with Steve Wozniak. Rode herd on his company, around the bend, perhaps, but succeeded in creating the personal computer. (Not so great, billions of cellphones littering the earth.)

Some Quotes by Steve Jobs

Material from azquotes.com

“It doesn’t make sense to hire smart people and tell them what to do; we hire smart people so they can tell us what to do.”
“Don’t let the noise of others’ opinions drown out your own inner voice.”
“If you define the problem correctly, you almost have the solution.”
“It takes a lot of hard work to make something simple.”
“Your time is limited, so don’t waste it living someone else’s life. Don’t be trapped by dogma – which is living with the results of other people’s thinking. ... And most important, have the courage to follow your heart and intuition.”

Steve Jobs, bio

Material obtained from astro.com/astro-databank/Steve. Excerpt reprinted as “fair use.” Abridged. Edited for brevity, clarity, and/or flow. Editor’s comments, etc., in square brackets. References omitted.

The man who inspired “insanely great” computers to use at home.

American entrepreneur, one of the originators of the computer revolution, co-founder of Apple Computer Corporation and Pixar Animation Studios. Adopted as an infant, Jobs was into electronics by the time he was 10. As a teenager, he got himself hired at Hewlett-Packard, a Silicon Valley computer giant. He dropped out of college and landed a job at Atari, a maker of video games. Called to pursue a spiritual quest, he left the corporate scene and traveled to India. Upon his return to the US, he went back to Atari but not for long. In 1976, Jobs and his pal Steve Wozniak made a circuit board in their garage that they called The Apple. At Steve’s urging, Woz designed a computer that was small enough and useful enough for businesses and consumers alike. Woz, the engineering genius, and Jobs, the charismatic visionary, successfully parlayed their perfect combination of skills and talents into a business. By the time he was 24, Job’s Apple Corporation was worth \$10 million. A year later, its value had grown to \$100 million. Its graphical user interface, business applications and word processing won kudos, and millions cheered while Apple took on IBM and its personal computer.

As the Apple empire grew, Steve became a tyrant, subject to moody outbursts and gloomy silences. Hard feelings arose and power struggles with other executives ensued. Jobs resigned on Sep. 17, 1985. The following year, 1986, he co-founded NeXT in an attempt to do for the hardware industry what he had done for software. With ever-broadening vision, he also bought a company which he renamed Pixar Animation Studios. He negotiated a deal with Disney to distribute Pixar’s films and became a Disney partner. Under Jobs’ leadership, Pixar won 20 Academy awards for such successful animated feature films as “Toy Story,” “A Bug’s Life” and “Finding Nemo.” In January 2006 Disney entered into an acquisition agreement with Pixar, leaving Jobs with a very large share of Disney stock and a seat on the Board of Directors.

With a twist of fate and a show of will, he convinced Apple to buy NeXT and was invited back to Apple in 1997 as interim CEO. In 2000, he was made permanent CEO. Under Jobs’ leadership Apple computer became a player in the computer industry once more. Jobs’ team created visually aesthetic computers in bright colors that appealed to younger buyers. The company’s venture into the entertainment industry fueled the growing coffers. In 2001 the company introduced the iPod and iTunes, enabling millions to listen to their favorite music on command. In September 2006 he unveiled his plans to use a similar model to enable consumers to download movies on their computers. ... ■

An economist who thinks “algorithms” are gods. And that we should all just submit to that one-dimensional mindset. I don’t think so.

Some Quotes by Yuval Noah Harari

Some quotes from his book, “How to Survive the 21st Century” and at the World Economic Forum, Davos in 2020.

“What should we do with all the superfluous people, once we have highly intelligent non-conscious algorithms that can do almost everything better than humans?”
“If the advice we get from Amazon, Google or Facebook is better the advice we get from our feelings, we will trust the algorithms of these companies more than our feelings.”
“You won’t go to the movies, you’ll download the movie into your brain via devices like Elon Musk’s Neuralink.”
“Humans think about life as a drama full of decision-making. What will be the meaning of human life if most decisions are taking by algorithms?”

Material obtained from various sites. Excerpts reprinted as “fair use.” Abridged. Edited for brevity, clarity, and/or flow. Editor’s comments, etc., in square brackets. References omitted.

Yuval Noah Harari

Klaus Schwab’s materialist techno-henchman and disciple.

The rise of the Useless Class

© 2017 Yuval Noah Harari (Feb. 24, 2017)

Originally from ideas.ted.com/the-rise-of-the-useless-class/. Material below excerpted from the new book “Homo Deus: A brief history of tomorrow,” by Yuval Noah Harari. Reprinted as “fair use.” Abridged. Some modification.

HISTORIAN YUVAL NOAH HARARI offers a bracing prediction: just as mass industrialization created the working class, the AI revolution will create a new unworking class.

The most important question in 21st-century economics may well be: ‘What should we do with all the superfluous people, once we have highly intelligent non-conscious algorithms that can do almost everything better than humans?’ ... The idea that humans will always have a unique ability beyond the reach of non-conscious algorithms is just wishful thinking.

The current scientific* answer to this pipe dream can be summarized in three simple principles:

*Editor’s comment: What Harari, Musk, Schwab et al have in common besides megalomania and dystopian antihumanism

is scientific materialism, itself an outdated concept, whereby the universe is perceived as essentially dead and everything in it explainable by “accidental” chemical reactions and/or “algorithms.” See Harari’s comments below. The “numinous” contingent of new scientific thinking (catching up with ancient wisdom) is that the universe and everything in it is alive and conscious. ◇

1. Organisms are algorithms. Every animal – including *Homo sapiens* - is an assemblage of organic algorithms shaped by natural selection over millions of years of evolution.
2. Algorithmic calculations are not affected by the materials from which the calculator is built. Whether an abacus is made of wood, iron or plastic, two beads plus two beads equals four beads.
3. Hence, there is no reason to think that organic algorithms can do things that non-organic algorithms will never be able to replicate or surpass. As long as the calculations remain valid, what does it matter whether the algorithms are manifested in carbon or silicon?

True, at present there are numerous things that organic algorithms do better than non-organic ones, and experts have repeatedly declared that some things will “forever” remain beyond the reach of non-organic algorithms. But it turns out that “forever” often means no more than a decade or two. Until a short time ago, facial recognition was a favorite example of something that babies accomplish easily but which escaped even the most powerful computers. Today, facial-recognition programs are able to identify people far more efficiently and quickly than humans can. ...

99% of human qualities and abilities are simply redundant for the perform-

See “Yuval Harari,” cont. on pg 18

“Hogwarts,” cont. from pg. 3

a figure famed for her intelligence and wit – *and that was before she wore her enchanted diadem, which was said to enhance the wisdom of the wearer.* Such a witch casts a long shadow, one **her daughter Helena** found it difficult to escape. *Envy*ing her mother’s status and power, she betrayed her by stealing the diadem – *believing it could make her powerful* – and ran away from Hogwarts. *The betrayal embarrassed Rowena, who told no one, including her fellow founders, that the diadem was missing.* ... **Helga Hufflepuff on the other hand...** Let’s go now to Helga Hufflepuff, *who was apparently the founder responsible for giving house-elves jobs in the kitchens, giving them somewhere to work where they would be treated fairly, and not be abused.* She was also very good at food-related charms, and her recipes are still used by Hogwarts for their feasts.

Godric Gryffindor’s legacy... Godric Gryffindor favoured the virtues of courage and heroism, and has been described by J.K. Rowling as ‘the best duelist of his time’ — both with a wand, and a sword. ... His legacy lives on with the **Sword of Gryffindor**, the relic that *Harry Potter used to destroy Horcruxes**. But he also endures through another object. [**A fragment of soul embedded in an object.*] You see, when the founders became

older, they were faced with a problem: *how would they ensure that students were sorted into the right House after they were gone?* For up until that point, that decision was made by them and them alone. *The solution?* Godric’s hat. The founders decided that the best course of action was for Godric to take off his hat so that all four of them could enchant it to sort students long after their deaths. And lo, the **Sorting Hat** was born. *The four houses have different entry requirements, and nobody summed them up better than the old Sorting Hat itself in its welcoming song...* □

House by House

Material obtained from harrypotterfan-dom.com. Reprinted as “fair use.” Abridged, etc. Some modification. All these poetic house qualities are listed in the first Potter book, “Harry Potter and the Philosopher’s Stone.”

Gryffindor Gryffindor House is where you would find the pluckiest and most daring students (*there’s a reason the house symbol is the brave lion*). The house colours are scarlet and gold, the common room lies up in Gryffindor Tower and the **Head of House** is Professor Minerva McGonagall. **Notable members include** ... Harry Potter, Hermione Granger and Ron Weasley. [*Ed’s: And Neville Longbottom, who performs a*

few heroics himself as we get to the end of the story arc.]

*You might belong in Gryffindor,
Where dwell the brave at heart,
Their daring, nerve and chivalry
Set Gryffindors apart.’*

Ravenclaw If you are looking for the brainiest students – you would find them in Ravenclaw (*with a couple of notable exceptions like Hermione Granger*). The Ravenclaw colours are blue and bronze, the emblem is an [raven]. The **Head of House** is Professor Filius Flitwick and the common room sits at the top of Ravenclaw Tower behind an enchanted knocker. **Notable members include** Luna Lovegood, Gilderoy Lockhart and Filius Flitwick.

*‘Or yet in wise old Ravenclaw
If you’ve a ready mind
Where those of wit and learning
Will always find their kind.’*

Hufflepuff Hufflepuff is where you will find the most trustworthy and hardworking students. *In fact, out of all the houses Hufflepuff has produced the least number of dark witches and wizards.* The badger is the symbol of this house, the colours are yellow and black, the **Head of House** is Professor Pomona Sprout and the common room can be found near the kitchens in Hogwarts.

There is an idea that Hufflepuffs are the least clever of all Hogwarts students – but that is not true. **Hufflepuffs are just the most humble of all the houses and don’t feel the need to shout about their achievements** in the same way as the others.

Notable members include Newt Scamander, Cedric Diggory and Nymphadora Tonks.

*‘You might belong in Hufflepuff
Where they are just and loyal
Those patient Hufflepuffs are true
And unafraid of toil.’*

Slytherin While it is true that a lot of dark witches and wizards were sorted into Slytherin, not all who belong to this house are bad. *In fact, there are a lot of excellent qualities the Sorting Hat looks for in potential Slytherins and Merlin himself even belonged to this misunderstood house!*

The house colours for Slytherin are silver and emerald green and the emblem is a serpent. The Head of House is Professor Severus Snape, and the common room can be found down in the dungeons under the lake (which only adds to the Slytherin air of mystery).

Notable members include Severus Snape, Draco Malfoy and ... Lord Voldemort [Tom Marvelo Riddle].

*‘Or perhaps in Slytherin
You’ll make your real friends
Those cunning folk use any means
To achieve their ends.’* ■

“Klaus Schwab bio,” cont. from pg. 16

start out as some kind of technocrat or engineer – trying to hijack humanity “for its own good.” Ian Fleming’s “James Bond” books and movies are filled with engineering (or scientific) types conspiring for world domination. And in “Dr. Who” (*a British sci-fi show for kids*), there’s a scientist named Davros (*kind of interesting, considering the robo-nature of the all-digital control system being conjured by attendees at the Davos, Switzerland yearly meetings*). But, “real life” often catches up with fiction. *Schwab’s overweening ambition and megalomaniacal dystopian post-human vision sees nothing wrong about trying to dismantle every aspect of current human culture and institute an engineer’s dream of total control.* This proto-robot is finally being seen for what he is.

Summary: Engineers should stay away from politics those linear mind’s efforts to control society (*even Jimmy Carter, with an engineering background didn’t see around corners*). Despite his protégé Yuval Harari’s (*previous page*) near-worship of “algorithms*,” **we are multi-dimensional beings that defy linear or even multi-level mechanical materialism.** Such engineering types who aspire to world domination seek to make all of us conform to a reductionist structure that can be totally controlled by an unelected elite – and now we can say, **unelected techno-elite.** ♦

*Algorithm – “A finite set of unambiguous instructions that, given some set of initial conditions, can be performed in a prescribed sequence to achieve a certain goal and that has a recognizable set of end conditions.” ◇

Klaus Schwab: Quick Read

(*See chart below.*) Schwab has quite a **contingent in Aries**, sign of the *pioneer, engineer, conquerer.* His **Sun** is closely conjunct **Saturn** which seems to have created that dour expression (even when he tries to smile). *Often a strong Saturn by sign or placement is seen in scientific types, though not generally as megalomaniacal as in this runaway idealist).*

Aries contingent: ignoring points like the true Midheaven (*indicated by a circle with a vertical line*): Eris (*Goddess of “don’t forget to include me or else” Discord*), Ceres (*Earth Goddess, who got very vengeful when her daughter, Persephone, was abducted by Hades*), Saturn, Sun all pretty close in Aries, then Venus, Mercury and Nessus (*the “N” with a circle appended, from Greek mythology – who is someone who takes what isn’t given freely, a hooligan of the Centaur race*) in Aries. *Lots of fire there.* Doesn’t look it does he – *one of the reasons I came up with the Cancer rising time of 12:14:49 pm. Anyway, on with the “Quick Read.”*

Taurus: Mars conj. Uranus and S. Node. *Pretty linear thinking there* – engineers looking to straighten out those social kinks, if they’ve forgotten their manners.

Neptune in Virgo combines an element of mystery with the Taurus group. Idealism that has a hard-headed core that doesn’t see the areas that won’t fit into a rigid structure.

Cancer: That **Pluto** rising (*as I posit*) in Cancer – it’s **square his Aries Mercury** conj. Nessus: *Forcible attempts to bend others to his will, with not a little emotional blackmail courtesy of his Moon in Pisces* trine that Pluto.

His nodal pattern, **S. Node in Taurus, N. Node in Scorpio**, is opposite the pattern we’ve seen for the last couple of years, *but soon to transition to Aries-Libra.* (*Oh o! More hard-headed thinking without consideration for the whole world of Others!*)

Disruption, reconfiguration of rigid structures for good or ill.

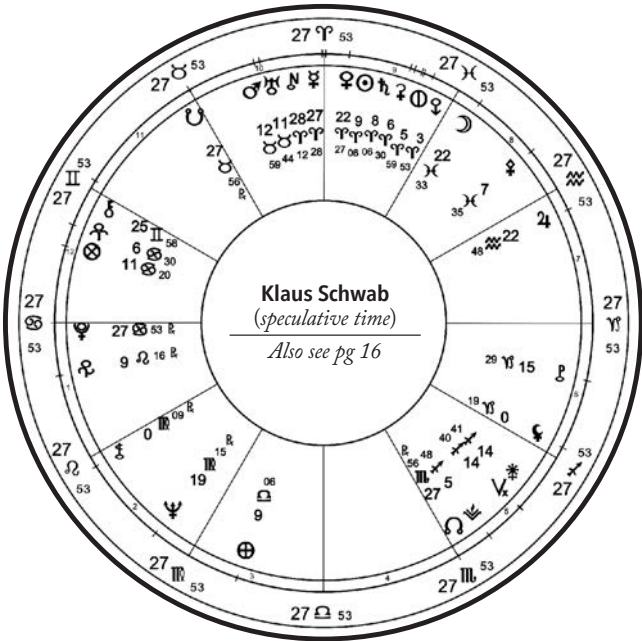

Chiron in Gemini trine **Jupiter in Aquarius:** Apparently, he really believes that what he’s doing is for the “good of mankind.” **He has plenty of swell sounding phrases that tend to include the “green” mantra, “build back better,”** and otherwise saving the earth from human mistakes. **However, that Jupiter isn’t helped by its square to his Taurus Uranus – just makes it nearly impossible for him to change his own concepts about what’s OK to do regardless of who or how many people are hurt in the process.** The “Ideal” is the thing, despite the harm engendered by reckless thinking that has an engineering mind behind it (*echoed by his Pisces Moon which also squares his Chiron in Gemini.*)

Vesta-Juno in Sagittarius – more idealism of the fiery kind, this time within higher institutions, perhaps a reason Schwab likes to have the “elite” approach to world domination, why he likes to invite those

who will be flattered and eager to participate.

As this isn’t an exhaustive look at Klaus, I won’t go over every point and placement. **However, I think it’s more than interesting that his Black Moon Lilith is in Capricorn, squaring his early Aries planets, including Eris.** BML tends to indicate an emotional response that won’t be held back – in Capricorn, this quality has to be Ambition. And too much narcissistic self-approval, which sees nothing wrong with taking control to institute the digital takeover of every human institution on earth. His capacity for self-rationalization is “astronomical” (*Chiron in Gemini, Jupiter in Aquarius?*).

Summation: *Simply put, Schwab’s materialistic ideals are not in humanity’s best interest, but at least his agenda is now “out,” and it’s up to us humans to defeat the technoblitz he and his gang are eager to unleash.* ♦

Mercola's take on Kim Iverson interview with Robert Kennedy, Jr. re the Military-Industrial-Complex & the Engineered Pandemic

Globalist Cabal Uses Same Old Tricks to Gain Power & Control

Analysis by Dr. Joseph Mercola Fact Checked (Feb. 25, 2023)

Material obtained from above site. Excerpt reprinted as “fair use.” Retitled. Abridged. Edited for brevity, clarity, and/or flow. Editor’s comments, etc., in square brackets. References omitted.

Robert F. Kennedy Jr. speaks the truth about the authoritarian pandemic response that continues to threaten democracy and liberty as we know it. It’s cost him friendships and 40 years of political contacts, not to mention loss of income and business relationships.

But the threats to his reputation and credibility, as the media have attacked him and his message, don’t feel like a sacrifice, Kennedy says, as he feels called upon to advocate for this issue. In an interview with journalist Kim Iversen, Kennedy explains,

I look at it as a gift. I was raised in a milieu, in a family, where we assume that our lives would be consumed in some controversy, and that it would be a privilege if we were able to take some meaningful role in that.

Living Through a Real-World Milgram Experiment Kennedy is part of the estimated 30% of the population who remained skeptical of the mainstream narrative throughout the pandemic. The majority, however, were not, instead [bought] fully into the fear and propaganda being sold to them.

He references the now-infamous experiment conducted by Yale University psychologist Stanley Milgram in 1962*, during which he tested the limits of human obedience to authority. The Milgram experiment was conducted following the trial of Nazi Adolf Eichmann, who used the Nuremberg defense, or “befehl ist befehl,” which translates to “an order is an order.” [Ed’s: This experiment was included in a 2022 issue of Pathfinder.]

The Milgram experiment clearly showed that people would act against their own judgment and harm another person to extreme lengths simply because they were told to do so. It was associated with the CIA’s top-secret MKULTRA project, which engaged in mind control experiments, human torture and other medical studies, including how much LSD it would take to “shatter the mind and blast away consciousness.”

MKULTRA was just one of a number of mind control experiments conducted by the CIA in the 1960s and 1970s. According to Kennedy:

The CIA did a lot of experiments with universities, almost 200 universities around the country with social scientists to study humans, human behavior, and they were experimenting with all kinds of things like psychiatric drugs ... psychedelic drugs, LSD, etc., with torture, with sensory deprivation, and all kinds of means for controlling not only individuals, but entire populations with propaganda, fear, all these things.

So you had all of these universities getting hundreds of thousands and millions of dollars from the CIA or from CIA front groups for programs that were called MKULTRA. The reason it’s called MK is that’s code for mind control. So MK Dietrich, MKULTRA, MK Naomi, Operation Artichoke, Operation Bluebird, many, many others, were all about funneling money to universities to study controlling human behavior.

Yet, even during the Milgram experiment, 33% of the people got up and walked out, refusing to violate their ethics.

They may be from a whole range of political backgrounds and parties, who just maintain that capacity for critical thinking, and is not subject to that override from authority ... And it seems to me that we’re all now in the grips of this huge Milgram experiment, where we have a Dr. Anthony Fauci, who is this trusted authority, telling us to do things that we know are wrong, like censor speech.

Fear Is the Enemy Fear is the enemy, as it allows totalitarian systems to take control of people, destroying democracy in the process, Kennedy says. It’s commonly used by people in authority to exert further control, like shot mandates and lockdowns. Children’s Health Defense, which Kennedy founded, has filed more than 50 lawsuits, many of them addressing COVID mandates.

In the beginning, even judges were too frightened to rule against the state dictates, leading to “really crazy decisions that made no sense,” Kennedy says. They’ve since made some progress, including in New York, where a judge said since the shot doesn’t prevent transmission, you can’t have a mandate for it.

But he points out that a government will not only not relinquish power, but will also abuse any power it has to the maximum extent possible. Just because the pandemic is over, the desire to control won’t go away. He explains:

People should keep in mind that nobody ever complied their way out of totalitarian regime rules. So, if you think that you know, by abandoning these rules, that somehow things are going to get better or it’s going to satiate the need to control you, it’s not. It’s just going to embolden them to do something worse.

Unprecedented: Technology Threatens Democracy Kennedy also states that we’re facing a situation we’ve never been in before. It’s not that democracy hasn’t been threatened, and lost, in the past, but now the technological tools are available for widespread surveillance:

There have been many times when we lost democracy. There has been polarization that was this bad before, particularly during the Civil War. But other times in our history, there have been very, very toxic polarization.

There’s been times when we lost democracy and that large corporations, particularly during the Gilded Age in the 1880s and 1890s ... the big oil companies like Standard Oil – were running our country, and we really did not have a functioning democracy.

The difference was that, back then, we started cutting away at this monolith of corporate and government power [i.e., Fascism], the merger of corporate power that had abolished democracy,” and were able to restore it. What’s different today is that we now have the technology available to control human behavior at a large scale:

The problem is that we’ve now got these instrumentalities, these technologies, for human behavioral control that we never had before. The ambition, the intention of every totalitarian regime in history is to control every aspect of human behavior – our speech, our thoughts, our transactions, our movements, everything that we do – but they’ve never been able to do that, because nobody, no government, has ever had that reach.

“There’s been times when we lost democracy and that large corporations, particularly during the Gilded Age in the 1880s and 1890s – you know, the big oil companies like Standard Oil – were running our country ... that we really did not have a functioning democracy.”
.....
“We’re living in the era that Dwight Eisenhower warned us against on Jan. 17, 1960 in his farewell speech. Eisenhower gave probably the most important speech in American history, where he warned Americans against the emergence of the military industrial complex – the intelligence agencies, the Pentagon and the associated industries, and he included the scientific bureaucracy.”
.....
“He specifically spent a lot of time in that speech arguing about the federal scientific bureaucracy, meaning NIH, that they would be the authors of the destruction of American democracy if we allowed them to do that.”
.....
... the job of the CIA is to develop a pipeline of new wars that America could fight to feed this machine, the military contractors ... The Pentagon and the National Security Agency ran the entire pandemic response. Pfizer and Moderna don’t really own those vaccines. They slap their labels on them, but it was a Pentagon project...

But today, we have facial recognition systems all over the place. We have satellite systems. Bill Gates says his satellite system, which is 61,000 satellites will be able to look at every square inch of the Earth 24 hours a day. We’re now beginning on the road to adopting digital currencies, which is economic slavery. As soon as that happens, we lose all rights because they will be able to starve you.

And we already have an example of that with a trucker strike, and in our demonstration in Toronto, Trudeau sent people out to look at the license plates for these truckers and then froze their bank accounts. So they couldn’t pay their mortgage, they couldn’t put their kids in school, they couldn’t buy food for their family. [But] none of them were charged with a crime.

There’s No ‘Pandemic Exemption’ in the Constitution Kennedy also makes the point that the framers of the Constitution did not add any exemptions due to pandemics. They were well aware of them, having experienced multiple epidemics during the Revolutionary War. But the Constitution was protected and allowed to function as intended. Adding exceptions is something new, Kennedy notes:

There were epidemics in every city that killed tens of thousands of people – yellow fever, cholera, smallpox and many others. So, the framers knew all about it. But they didn’t put an epidemic or pandemic exception in the United States Constitution. ... [Lincoln] tried to get rid of Habeas Corpus, the Supreme Court said, ‘You can’t do that.’ There’s no exemption for war [and] there’s no exception for pandemics. We had a Spanish flu pandemic in 1918 ... that killed 50 million people. And yet, we did not stop the Constitution from functioning.

Censorship Destroys Democracy Kennedy says the remedy to stop totalitarian control is democracy. But, “My father always said that democracy was completely dependent on the free flow of information.” ... If you shut off the free flow of information and start censoring things,” Kennedy says, we lose the one advantage that we have.... Right now, we’re facing institutional corruption, with the military industrial complex at the helm.

I think if you removed Anthony Fauci he’s going to be replaced by another Anthony Fauci,” Kennedy explains.

Meanwhile, he says, it’s the military industrial complex, which also owns the press, that we need to take democracy back from:

We’re living in the era that Dwight Eisenhower warned us against on Jan. 17, 1960 in his farewell speech. Eisenhower gave probably the most important speech in American history, where he warned Americans against the emergence of the military industrial complex – the intelligence agencies, the Pentagon and the associated industries, and he included the scientific bureaucracy.

He specifically spent a lot of time in that speech arguing about the federal scientific bureaucracy, meaning NIH, that they would be the authors of the destruction of American democracy if we allowed them to do that. And then 9/11 turned America ... into the beginnings of a surveillance state. And Covid completed the task.

... the job of the CIA is to develop a pipeline of new wars that America could fight to feed this machine, the military contractors, and look what happened in Covid – 138 companies were involved in manufacturing and distributing the vaccine.

They’re all military contractors. The Pentagon and the National Security Agency ran the entire pandemic response. Pfizer and Moderna don’t really own those vaccines. They slap their labels on them, but it was a Pentagon project. And so, you know, we’re dealing with a military industrial complex.

Can Democracy Withstand Turnkey Totalitarianism? With totalitarian forces angling to control every aspect of human behavior, the time for dissent is now. The first step is waking up to the truth. The next is to stand up for what you believe in. ... According to Kennedy:

The levels of control that they have now over human behavior are greater than we’ve ever seen. It’s what I call turnkey totalitarianism we’re trying to educate the public and build our army to restore democracy.

And they’re rising at the same time to put this infrastructure in place that will give them total control, destroy dissent and disable any kind of insurgency or subversion or any difference with the official government narrative... It’s really hard to predict whether democracy will have the resiliency to restore those institutions. ■

ATOMIC ANATOMY OF GOLD. This is a depiction of a GOLD [AU] atom with its 6 valence shells (*count them!*), and 79 electrons arrayed within is shells. (Considered to be the probability of finding an electron in whatever state of “excitation” or orbital position it may assume.) See *Electron Shell nomenclature this page*.

How valence shells get their shells filled with electrons to achieve stability will have to wait for another day. ♦

● 79 Protons ● 118 neutrons ● 79 Electrons

Lanthanides: Material obtained from chem.libretexts.org/...

The Lanthanides consist of the elements in the f-block of period six in the periodic table. While these metals can be considered transition metals, they have properties that set them apart from the rest of the elements.

The Lanthanides were first discovered in 1787 when a unusual black mineral was found in Ytterby, Sweden. This mineral, now known as Gadolinite... In 1794, Professor Gadolin obtained yttria, an impure form of yttrium oxide, from the mineral. In 1803, Berzelius and Klaproth secluded the first Cerium compound. Later, Moseley used an x-ray spectra of the elements to prove that there were fourteen elements between Lanthanum and Hafnium. The rest of the elements were later separated from the same mineral. These elements were first classified as ‘rare earth’ due to the fact that obtained by reasonably rare minerals. However, this is can be misleading since the Lanthanide elements have a practically unlimited abundance. The term Lanthanides was adopted, originating from the first element of the series, Lanthanum. ... The Lanthanides have similarities in their electron configuration [which] were primarily

established through experiments. The technique used is based on the fact that each line in an emission spectrum reveals the energy change involved in the transition of an electron from one energy level to another. ... □

Actinides [Updated Jul 24, 2021] The Actinide series contains elements with atomic numbers 89 to 103 and is in the sixth period and the third group of the periodic table. The series is the row below the Lanthanide series, which is located underneath the main body of the periodic table. Lanthanide and Actinide Series are both referred to as Rare Earth Metals. These elements all have a high diversity in oxidation numbers and all are radioactive. The most common and known element is Uranium, which is used as nuclear fuel when its converted into plutonium, through a nuclear reaction. ♦ The first actinides to be discovered were Uranium by Klaproth in 1789 and Thorium by Berzelius in 1829, but most of the Actinides were man-made products of the 20th century. ... The main Uranium ore is U₃O₈ and is known as pitchblende, because it occurs in black, pitch-like masses. All elements past Uranium are man-made. Actinides require special handling, because many of them are radioactive and/or unstable. The radiation in actinides plays a large role in the chemistry and arrangement of particles in crystals. ... Many of the actinides occur in nature as sea water or minerals. ... The interaction of Actinides when radioactive with different types of phosphors will produce pulses of light. ■

How Electron Shells are Named
Material from antoine.frostburg.edu/chem/senese/101/electrons/fajq/why-KLMNOP.shtml.

How did they decide to name the electron valence shells “K - L - M - N - O - P”?

In the early twentieth century, scientists were intensely interested in X-rays*, which had just been discovered. Especially fascinating was the fact that elements emit X-rays when bombarded with streams of fast-moving electrons (as in J. J. Thomson’s cathode ray tube). This discovery is the basis for medical and dental X-ray machines. [*See “Pisces/Aries,” Wilhelm Röntgen who discovered X-rays, pg 23.]

When high-energy electrons hit a sample of an element, they ionize its atoms in a rather unusual way. An inner shell electron is lost in the initial impact, and when it is recaptured, a great deal of energy is released in the form of X-rays.

The X-rays emitted seemed to be of two types. One type was able to penetrate sheets of metal of a certain thickness; the other wasn’t. The spectroscopist who discovered this (Charles G. Barkla) named the more penetrating type A and the less penetrating type B, initially. But he worried that even more penetrating types of X-ray radiation would be discovered for other elements, so he renamed them K and L to leave room for more penetrating types A through J. These more penetrating radiations were never observed. [See editor’s comment at the end.]

Barkla’s work was continued by Moseley and others, and eventually it became the basis for an experimental procedure for determining the atomic num-

bers of the elements. For his contribution, Barkla received the 1917 Nobel prize in Physics.

Today we know that Barkla’s K radiation is produced when electrons knocked out of the n=1 shell are recaptured. L radiation is produced when electrons knocked out of the n=2 shell are recaptured...

*Editor’s comment: Seems confusing, doesn’t it? Try breaking each segment of this down, and let it percolate a while. One thing, though, stands out to me and that is my notion of “Conservation of Information.” The scientific world (like many other cultural groups) is filled with “left over” information, like the way Barkla went about naming and identifying the various electron shells. Anyway, it seems that electrons are not as scientists first imagined them, i.e., as “billiard ball” type particles – but their quantum energy states as named hold up. And the notion of “valence shells” – which note the kinds of atomic and molecular bonds that can be formed, i.e., electrons that can be gained or lost in chemical reactions and the resulting energy state of a molecule. One example is H₂O, where the Oxygen atom shares an outer electron between two Hydrogen atoms, an example of “covalent” bonding.

I hope this Periodic Table, Sidebars and notes on naming electron shells provokes some inquiries amongst my readers. We live in a “scientific culture,” but few have any understanding of how any of it works. Knowing a few things helps bridge gaps in our knowledge base. Cheers! ♦

“Gold & Alchemy, cont from pg. 6

mixed in water, was known as The Golden Tear from the Eye of Horus. It was called, “*That which issues from the mouth of the creator.*” The spittle. Not the word of God, but the spittle. Or the semen of the father in heaven. If you put the white powder in water, it doesn’t dissolve. It forms this gelatinous suspension and looks just like a vial of semen. Being a farmer, I know what semen looks like.

“The symbolism of “prepare yourself like a bride in the bridal chamber,” purify and cleanse yourself, prepare yourself for the coming of the Father in heaven, to be inseminated by the father in heaven in the bridal chamber.To totally be regenerated, to be purified, to be cleansed. Every cell in your body will be taken back to the way it’s supposed to be, when you were a teenager or a child. It perfects the DNA. And it flows the light until you reach the point where the light body exceeds the physical body.

“In ancient Egypt, they said you have a physical body you must feed to grow as it’s meant to be. ... But you also have to feed the spirit body, you have to feed the ka, what they called it in ancient Egypt – so it can grow and become what it’s meant to be. And most of you aren’t feeding your ka. It’s sitting there like a little runt inside your body. ... they said you feed it and feed it and feed it with ... and it grows and grows and becomes more enlightened and more enlightened, and you reach the point where the light body exceeds the physical body. You light up the room when you walk in.

“The gifts that go with this are: perfect telepathy, you can know good and evil when it’s in the room with you, you also can project your thoughts into someone else’s mind. You can levitate; you can walk on water because it’s flowing so much light within you that you don’t attract gravity. And when you understand that when you exclude all external magnetic fields, when you exclude gravity, you are no longer of this space-time. You become a fifth-dimensional being. You can think where you would like to be, and go there. Just disappear. You also have other attributes that they go into. You can heal by the laying on of hands, and can cleanse and resurrect the dead within two or three days after they died. You have so much energy that you can embrace people and bring light and energy back into them.

“Religion has tried to do this for two thousand years, and it’s failed miserably. The world is no dam good. People are no dam good. They’re greedy; they’re selfish. The Capitalist system has worn out, based on selfishness and greed. But Science can take this to the world in four or five years. Once it is accepted and understood by scientists, the breakthroughs will just be astronomical. ...

“You can fill yourself with this light. In *The Dead Sea Scrolls Uncovered*, not only did the Qumran community have a metallurgical foundry in the middle of the city, but you also find out that the Teacher of Righteousness, this thing they were totally preoccupied with, wasn’t Moses or Christ. It says the High Priest swallows the Teacher of Righteousness. The TR [teacher of righteousness] is the holy spirit. the TR for those scientists is the light, the zero-point light that isn’t measurable. It is, in fact, the light, the god source within us. We know all things. We don’t have to read or study. We just know.

“When your light body exceeds your material body, you don’t have to eat food. You can if you want, but you don’t have to. You have perfect telepathy. How much more could you ever be judged than for everyone to know your

heart and your mind. Everything about you is known. No more hidden agendas, no more lies, no more deceit. Everything is known. And this is called the opening of the book of light. In Revelations, it says, “Blessed be the man who shall overcome, for he shall be given the hidden manna, the white stone of the purest kind upon which will be written a new name.” He will not be the same person. It’s encoded in your DNA waiting to be activated.

“It says that at 1160° ... the white powder of gold fuses to form gold glass.* It’s a transparent glass, just like window glass. And in Revelations, it says, “The streets of the New Jerusalem will be paved with gold of the purest light, as transparent as glass, and the foundations of New Jerusalem will be made with gold liken unto glass.” [*Ed’s: In “Holy Blood, Holy Grail,” mention is made of the superb stained glass used in cathedrals – gold-infused glass, by the way.]

“This is the gold glass, the very basis of the New Jerusalem. The very basis of raising our self and our consciousness to this higher state. This highest light that will activate all of our DNA will cause us to use all of our brain again, and we will return again to the original state that we were created to be in. Before we fell to the sleeping existence we know now.

“These elements are in all of the herbs, the herbal teas, and many of the vegetables you vegetarians are eating. You get them in small amounts. Through work, dedication, years of study and meditation, you can achieve similar results. But it is tough to be a Tibetan Monk. This is called the Keys of the Kingdom. You insert it, and turn it ... It isn’t the answer, but the way to the answer. But if you step through that door, that’s your decision. Nobody’s going to make you take it. ■

Note the Periodic Table previous page. The “transitional elements in the middle” are those that David Hudson mentions in his presentation. I thought it would be helpful to readers to begin to explore this wonderfully integrated table of information. Don’t be intimidated – look and see what’s there. While there are plenty of distractions, pondering the relationship between elements is a worthy task. I and Pathfinder try to provide a bridge that respects both Science and Spirit.

The First Alchemist

The first Alchemist that I know of was St. Germain, sometimes called The Immortal, as he is recorded as having visited many personages over the ages. According to legend, he developed his Atlantean craft-skill to the point where he “put on his Light Body” and was able to appear and disappear, just like the noble metal, gold, in David Hudson’s experiments.

From what Scientists (and new age Alchemists) are now finding out about gold as the “Teacher of Righteous,” it seems sacrilegious to store it away in vaults and use only its metallic form as a basis for establishing material value — or adding it to zillions of circuit boards to be tossed away like candy wrappers. Its true value is in enhancing and accelerating spiritual evolution.

Is it possible that ancient kings and their wiley priests started minting gold so they could obscure its spiritual and health value? And later, “bankers” (or Baal worshipers) seized it to use for base commercial transactions)? I suggest that we devise a different source for valuation so that this precious “sweat of the gods” be used as God Source intended: rise up and be light! ❖

Some Symbols of the “newer” celestial bodies...

Trans-Neptunian Objects {TNOs} and more - coming into mass consciousness

This legend expands the range of planetary archetypes. Our subconscious and intuition are now more likely to be receptive to their significance. It really does pay to study the myths of various cultures; myths are the condensed and packaged knowledge passed down through many thousands of years. Like seeds, waiting the right conditions to sprout.❖

Trans-Neptune and Other Point Symbols (See symbols on pg 15)	
Other symbols appear in the charts above, e.g., the Centaur group between Jupiter and Neptune, presumed to have originated in the Kuiper Belt. Major ones are <i>Pholus</i> , <i>Nessus</i> , <i>Chariklo</i> . Some “plutoids” are often used in chart analysis, with orbital periods so long, that unless they contact an angle or natal planet, their impact is likely to be mainly unconscious – or perhaps, “pre-conscious,” e.g., <i>Eris</i> , <i>Makemake</i> , <i>Haumea</i> . Try to match the symbols with their names. Points include the <i>Vertex</i> (like a “V” with an “X” at the bottom); <i>Earth</i> , a circle with an upright cross; <i>Part of Fortune</i> , a “X” in a circle, and the <i>Black Moon Lilith</i> , reverse black crescent above a cross, associated with unbounded emotion (the nature of which will depend upon the sign it appears in). Information on the Centaurs, so named, stem from the first of them discovered in 1977, subsequently named Chiron. The Greek tale of what happened between Heracles and the Centaurs gives many insights to taboo / unleashed impulses and areas of emotional wounding arising from them along with their collection of consequences. Be that as it may, the group of asteroids between Saturn-Neptune has proven to be a fruitful area for Archetypal astrology, from Chiron on out.	
Centaur Primer	
The material on some of the outer bodies, and several named Centaurs below is from TimePassages, and most glyphs.	
	Chariklo ... was a sea nymph and Chiron’s wife and mother of Tiresias, the blind seer. Astronomically, the orbital period for Chariklo is around 62 years. Her orbit ranges between Saturn and Uranus but doesn’t intersect Saturn’s orbit (unlike that of Chiron). The astrological archetype of Chariklo seems to represent individuals who are able to see the unknown more readily. She is prominent in the charts of inventors and science fiction authors. She represents turning toward the mystical and forging an opening to the numinous unknown. Where Chariklo is found in the natal chart may represent a place of wisdom that transcends the boundaries of the natural world, a place where you must ‘close your eyes to see.’
	Makemake ... the second “new” [quotes added] planet, or dwarf planet, or ‘plutoid’, to be officially named... The period of MakeMake is 310 years The official name refers to the creation god of Easter Island, or Rapa Nui. In size somewhat smaller than either Pluto or Eris... [Makemake] is the creation god of Rapa Nui, MakeMake symbolizes a connection with environmental [lessons learned the hard way]. Where he is found in charts there can be found also the wisdom of the earth and the capacity for spiritual renewal.
	Haumea... The third trans-Neptunian Object, or TNO, to be officially designated as a dwarf planet, after Eris and MakeMake, Haumea was discovered just after Christmas 2004 (discoverer Mike Brown). Its discovery was officially announced on July 29th, 2005, by his group. Haumea is different from other TNOs in that it is rocky, as befits a goddess of the earth, and rotating extremely rapidly – a revolution every 4 hours. As a result, its shape is elongated, like a small cigar [or an elongated egg]. Its orbital period is 283 years. Creation goddess of the islands of Hawaii, Haumea was the source of many gods and goddesses as well as of the race of humankind. Pele, Hi’iaka, Namaka, Laka and many others... Her skill at childbirth is recounted in countless stories. Children sprang from different parts of her body...
	Chiron (Has something over a 50-year orbit; NASA’s site: 50.39 years. The “39” years is approximately 4 months) I’ve included quite a bit about Chiron in previous Pathfinders, so will simply say that although characterized by the astrological community as “the wounded healer,” often missed is the character of the wound Chiron received: he was an immortal, being a son of Zeus, so when he was hit by one of Heracles’ poisoned arrows he didn’t die, but his wound never healed. (He received a poison arrow shot when Heracles tried to put down that drunken Centaur bacchanal.) His energy shows up in an area of life that won’t be healed, but must just be tolerated, and where we surrender to the fact of our being wounded.
	Eris (Goddess of Strife and Discord) This Goddess planetoid, about the size of Pluto, has roughly twice Pluto’s orbital period (557 years to about 250 years for Pluto). Her energy is to upend established relationships, tradition and “the way things were.” One way to deal with Her energy is to acknowledge the disruption and find ways to work with it or around it – taking advantage of chaotic circumstances to seek a better order. Eris definitely doesn’t want to be left out of things – like that evil fairy who wasn’t invited to Sleeping Beauty’s christening and so cursed the beautiful child. We are called upon to undo that curse with appropriate workarounds (like the other 11 fairies at Sleeping Beauty’s christening).
	Lilith* ... Black Moon Lilith represents the apogee of the lunar orbit, where it lies farthest from the earth. This mystical astrological point cycles once around the chart every nine years... [Although there is an asteroid with the same name as well as an unverified “second moon” of Earth] Black Moon Lilith has been the most typically used in modern Western Astrology. Lilith represents an important piece of the feminine that has been lost or shunned in modern patriarchal society. She was worshipped in ancient Babylonia as the handmaiden of Innana and also viewed with distrust as the archetype of wild and uncontrolled sexuality. She is identified in Hebrew mythology as the first and rejected wife of Adam, who found [independent].
	Nessus has an orbital period of 122 1/2 years. Just as the orbit of Nessus links Saturn with Pluto. The mythology of Nessus partakes of some of the same elements as the other Centaur stories, including painful death. When Nessus was ferrying Hercules’ bride, Deianeira, across a river, he tried to rape her and so Hercules shot him through the heart with a poisoned arrow... Nessus represents those powerful and instinctual urges, those “unredeemed” impulses that seek to satisfy their own appetites (and lusts) at the expense of any self-restraint.
	Pholus was discovered on Jan. 9, 1992 and termed a Centaur, the second of a class of small objects with eccentric orbits beyond the path of Saturn. Pholus is red in color and has an orbital period of 92 years. The orbit of Pholus links Saturn and Neptune. Pholus suffered a fatal wounding from the poison arrows of Hercules, after a fracas in which the wine he was entrusted with was inadvertently opened to please Hercules. Pholus sacrificed himself for the greater good, a Neptunian theme... There is also the motif of intoxication, which might be expected from the link between Saturn [practical reality], and Neptune [numinous, out-of-this-world experience.]

Quote: “To learn to read is to light a fire; every syllable that is spelled out is a spark.”

—Victor Hugo (Feb. 26, 1802; d. May 22, 1885)

French novelist; wrote “Les Miserables,” “The Hunchback of Notre Dame” among his works.

(From astro.com: a “...poet, dramatist, novelist, essayist, gifted painter, architect and critic who, as an eclectic genius, was hard-working, politically active and a humanitarian.”)

“Yval Harari, ” cont. from pg. 17

ance of most modern jobs. [As] time goes by, it becomes easier and easier to replace humans with computer algorithms... *For Al to squeeze humans out of the job market it need only outperform us in the specific abilities a particular profession demands.*

As algorithms push humans out of the job market, wealth and power might* become concentrated in the hands of the tiny elite [owning] the all-powerful algorithms, creating unprecedented social and political inequality. [*Ed’s: *Has*]

*Alternatively, the algorithms might themselves become the owners. Human law already recognizes intersubjective entities like corporations and nations as “legal persons.”**

*Editor’s comment: Precisely why we need to strip out that “legal precedent” that got incorporated into our “laws” from the late 1800s on, and invalidate every law based upon it since. I’ve written about this since at least 2010.

Result? Corporations will be summarily “executed” as “legal persons,” and their felonious deeds stripped of the flimsy legality and protections that they had enveloped themselves. *Their “legal persons” protection, gone.* All the megalomaniacs running them rounded up *en masse* and placed in “holding cells” awaiting judgment separated according to the severity of their crimes against the planet and

centralized authority that cannot help but lead to less individual and community freedom for you and your family.

In short, a globalist cabal is carrying out a long-ranging plan that involves the use of endless wars and pandemics to legitimize centralization, digitization, dystopian mass surveillance and other totalitarian controls. □

CBDCs – Plan to End All Currencies

FINANCE GURU CATHERINE AUSTIN FITTS, publisher of The Solari Report (*home.solari.com*) warns that a slavery system, steeped in the ideologies of trans humanism and technocracy, is being created right before our eyes. The [slavery plan] used the pandemic to engineer a total remake of world currencies and our entire way of life. ...

Fitts explains how the pandemic lined people up to depend on their governments for protection from an invisible enemy (Covid-19) and then used fear to keep people from living what once was considered a normal life. ...

In The Corbett Report [video], hear Agustin Carstens, executive director of the Bank for International Settlements, describe the chilling truth about CBDCs. *Corbett describes the Bank for International Settlements – the “central bank of central banks – the apex of the financial monetary pyramid, identified by Carroll Quigley in ‘Tragedy and Hope’ – and others as the capstone of the Pyramid of Power.”*

Carstens says:

We don’t know, for example, who is using a \$100 bill today. We don’t know who is using the 1,000-peso bill today*. A key difference with the CBDC is central bank will have absolute control on the rules and regulations that will determine the use of that expression of central bank liability. And also we will have the technology to enforce that. [*Ed’s: *Why in the h*ll should they?! Is everyone an international drug lord? Kill-for-bire villain? Why should such a question even crop up? Sociopathic meddling?*]

humanity. Many will face real – not “virtual” – execution. All their crimes will be revealed, their satanic rituals and child trafficking, their abuse of the planet. *Their corporate punishment,* Receivership: Every penny (or whatever currency) gained will be placed in the Planetary Restoration Fund and that includes all profits from third party investors like Vanguard, Blackrock, and the like – paying out appropriate reparations to billions of victims, and to Nature herself, through a vast regenerative undertaking that utilizes clean, amazing technology just waiting to be put into use. (*See Dr. Greer’s segment in “Why we (have to continue to) fight.”*)

Though Toyota or Argentina has neither a body nor a mind, they are subject to international laws, they can own land and money, and they can sue and be sued in court. We might soon grant similar status to algorithms. An algorithm could then “own” [quotes added] a transportation empire or a venture-capital fund without having to obey the wishes of any human master. Before dismissing the idea, remember that most of our planet is already legally owned by non-human intersubjective entities, namely nations and corporations. ...

Editor’s comment: Towering, idiotic hubris – a Greek concept that describes the kind of arrogance and pride that “provokes the wrath of the gods.”

So what will people do? Art is often said to

CBDCs Instrumental for Social Control

CBDCs are an integral part of a social control system. *By removing paper currency and replacing it with CBDCs, your ability to engage in transactions can be monitored and turned on and off. What could this look like in your day-to-day life?* British activist Maajid Nawaz put it into simple terms, likening CBDCs to vouchers instead of currency – *vouchers that have a finite limit for certain purchases, and once your quota is met, you can’t obtain any more:*

They want to replace fiat paper money with digital money as a competitor to Bitcoin and crypto money, right?

But instead of being decentralized currency, it will be [centrally] controlled by a government. So instead of having a bank account with HSBC or Bank of America, you’ll have a bank account directly with – in the American context, with the Fed – *in the UK, directly with the Bank of England.* ...

Money that you earn from work, instead of having paper money, you have this digital money. It’s programmable so that you can’t buy certain foods, or if you do something that your employer doesn’t like you won’t be able to spend your money. In other words, it’s not money, they’re vouchers. ...

So ... like the Chinese social credit system, if you try and use them on a certain thing, it won’t work. *Say you want to buy a burger, and they want you to buy a box if you start to try and buy unhealthy meat, it just won’t work you tap your card, you can’t buy the thing, because you’ve met your [burger] quota that month.*

We’re talking about a world where most people are under 24/7 surveillance and then their financial incentives and their financial power are related to how “well-behaved” [quotes added] they are...

According to Fitts:

In my opinion, CBDCS (central bank digital currencies) are an essential part of the ongoing financial coup d’etat which – if successful – will end constitutional government and human liberties in the US and G7 nations. ...

Actions You Can Take to Stop CBDCs Implementation of CBDCs is moving ahead, fast. In 2023, 11 countries have fully launched a dig-

Yuval Harari: “[As] time goes by, it becomes easier and easier to replace humans with computer algorithms...”

.....

“In the 21st century we might witness the creation of a massive new unworking class: people devoid of any economic, political or even artistic value, who contribute nothing to the prosperity, power and glory of society. This ‘useless class’ will not merely be unemployed - it will be unemployable. ... What’s so sacred about useless bums who pass their days devouring artificial experiences?”

provide us with our ultimate (and uniquely human) sanctuary. In a world where computers have replaced doctors, drivers, teachers and even landlords, would everyone become an artist? Yet it is hard to see why artistic creation would be safe from the algorithms. ... There is no reason why non-organic algorithms couldn’t master it. ... In the 21st century we might witness the creation of a massive new unworking class: people devoid of any economic, political or even artistic value, who contribute nothing to the prosperity, power and glory of society. *This “useless class” will not merely be unemployed – it will be unemployable. ... What’s so sacred about useless bums who pass their days devouring artificial experiences?*

Some experts and thinkers, such as Nick Bostrom (TED Talk: What happens when our computers get smarter than we are?)... Once artificial intelligence surpasses human intelligence, it

ital currency while more than 20 more will move toward starting one. All G7 nationals are now actively developing CBDCs, including the US. Further, 114 countries, [representing] 95% of global GDP, are looking into CBDC – up from just 35 countries in 2020.

Catherine Fitts’ ‘how to stop CBDCs’:

1. Use cash – *Use cash as much as possible – don’t shop or go places that won’t accept it.*

2. Go analog – *An entirely digital system is at risk of being manipulated and controlled by a central power. Minimize your use of digital systems; avoid biometric technology and QR codes [Ed’s: Scan-in matrix holograms we see everywhere]. Remove invasive surveillance systems from your home [e.g. baby monitors]. Use hard-wired Internet connections, not Wi-Fi...*

3. Do business with people you trust – *Do busiess with people of integrity.* Corbett refers to this as “freedom cells” and suggests *joining with a small group of eight or so other people... in a local exchange trading system or using some form of community currency.*

4. Find a small, local bank – *Ditch large, multi-national banks in favor of trustworthy local banks or credit unions. Let bankers know about the dangers of CBDCs*.*

*Editor’s: *I tried this with a couple of local banks we do business with, and neither was fully aware of the implications of the CBDC, but I hope my call gave them some kind of warning. What they do with it, who can say.*

5. Finance friends, not enemies – *Limit the number of online and digital financial transactions you make, avoid supporting credit card companies and financial technology firms*

might simply exterminate humankind. ... ■

Editor’s comment: I’ve given readers of *Pathfinder* a path to understanding some of this through referencing the artistic realm of Science Fiction. Example: In the above scenario, there was the 70s movie “Colossus: The Forbin Project.” *See it.* See the tale-tale anti-humanism of all of this blather about “algorithms.” Then, there are the numerous scenarios in the first Star Trek franchise, e.g., “The Ultimate Computer” (’68) where Star Fleet tries to replace the captaincy of a star ship with an “algorithm,” i.e., computer. *Disaster. Mere humans had to save the day.* Also, a computer gone amok, “The Changeling.” *Kirk saves us again. By the way, I don’t think Gaia will agree with Harari, et al, nor our off-world visitors and kin. ♦*

“They want to replace fiat paper money with digital money as a competitor to Bitcoin and crypto money, right? ... “But instead of being decentralized currency, it will be [centrally] controlled by a government. So instead of having a bank account with HSBC or Bank of America, you’ll have a bank account directly with ... the Fed...”

- intent on expanding digital IDs, vaccine passports and CBDCs. ...*
6. Ask state officials to support financial freedom – [e.g.] *asking your state legislators to start a sovereign state bank that protects the right to free financial transactions. ...*
7. Hold the New York Fed accountable – *The New York Federal Reserve Bank acts as the depository of the US gov. and stores the largest known depository of gold in the world. Contact your representatives to demand an audit of the New York Fed, including tracing \$21 trillion in funds missing from the US government and returning it. Tell your congressional representatives not to pass any legislation or grant the Fed (most notably the New York Fed) any more powers or funding until the Fed is audited and makes restitution for all illegal transactions in US government accounts held by it or its member banks. Accept no argument that the executive branch has the authority to proceed with the institution of CBDCs without congressional approval.*
8. Tell the US to leave WHO – *[The US govt. set up the WHO Organization which as demonstrated its total disregard for, ironically, “world health”].*
- The WHO... is using the health care system to institute vaccine passports... a way of getting the authentication system needed for CBDCs and [control of human movement].
9. Reject taxation without representation – This will happen as *CBDCs usher in an era of taxation without representation, by granting complete control of individuals’ financial transactions to central bankers.*
10. Share your knowledge with friends and family – *Tell everyone you know about the true intention of CBDCs so they can also take action against them. ■*

Pisces / Aries : Taurus / Gemini

Editor's Apologies:
Because of many time and other disruptions, the featured astrological notables is condensed to birth data and a couple of "one liners." (*And I so wished to depict some of the folks we have heard about but wouldn't recognize. They deserve a better airing, but not for this issue.*)
For the double issue focus on *Taurus and Gemini*, again, *I simply didn't have time to do the careful pruning and "curating" of birth data and astrological information for this segment.* Some of those I wanted to feature for the *May/June 2023* group are listed below in no particular date order, but as I reacted to them as they appeared in a very excellent site* that isn't exclusively devoted to current "celebrities" or movie stars. *No short list can ever do a complete rendering of any star sign, but sometimes it helps to think about traits expressed in individuals through a given sun sign. See if you can tell who they are and what they did.* ❖ (*onthistoday.com/people/star-signs)

- ### Notably Pisces

Antonio Vivaldi Mar. 4, 1678 (Gregorian) Venice, Italy (*Violinist and composer, a master of the Baroque style; refined, stirring, unforgettable.*)

Casimir Pulaski Mar. 6, 1747 (Gregorian) Warsaw, Poland (*Polish knight and military genius who fought to help the Colonies free themselves from England, among other campaigns. A "Soldier of Liberty."*)

Federick Chopin Mar. 1, 1810, Warsaw, Poland (*Polish pianist and composer in the Romantic vein. Some of the most lovely piano work ever composed.*)

Wyatt Earp Mar. 19, 1848, Monmouth, IL (*Gambler, gunman, sometime lawman. Was with Doc Holiday against the Clanton outlaw gang at the OK Corral.*)

Maurice Ravel Mar. 7, 1875, Ciborne, France. (*A protégé of Debussy in the impressionist musical style. Very evocative, dreamy music that takes you there.*)

Bobby Fischer Mar. 9, 1943, Chicago, IL. (*American chess champion, youngest Grand Master in history [1958]. Reclusive and eccentric chess genius, prone to controversial statements.*)
- ### Notably Aries

Tamerlane Apr. 8, 1336 (Gregorian?) Kesh (Shahrisabz), Uzbekistan. (*Conquered parts of Russia, India, eastern Europe (14th c). His bloodlust and cruelty didn't offset the luster of his defeat of the Ottoman Turks.*)

Renés Descartes Mar. 31, 1596 Descartes Indret-Loure, France. (*"I think therefore I am." Mathematician, philosopher; created the coordinate system.*)

Otto von Bismarck Apr. 1, 1815 Schonhausen, Prussia. (*Consolidated the Germanic states into a modern ("war power") nation in the 1870s. Germany's first Chancellor.*)

Wilhelm Röntgen Mar. 27, 1845 Lennep, Germany. (*Physicist, discovered x-rays, sometimes known as "Röntgen Rays."*)

Booker T. Washington Apr. 5, 1826 Rocky Mount, Va. (*Born into slavery, he became a great educational leader, founded Tuskegee Inst. for blacks.*)

Harry Houdini (born Erik Weisz) Mar. 24, 1874 Budapest, Hungary. (*Famous "escape artist"; daring, athletic. Tempted death, escaping just about everything.*)

- ### Notably Taurus

Rabindrath Tagore

Sigmund Freud

Nicolo Machiavelli

Robert Oppenheimer

Guglielmo Marconi

Karl Marx

Harry Truman

Pyotr Tchaikovsky

Pol Pot

Mark Zuckerberg
- ### Notably Gemini

Norman Vincent Peale

Barry Commoner

Richard Wagner

Blaise Pascal

Peter the Great

Daniel Fahrenheit

Henry Kissinger

Geronimo (Apache)

John F. Kennedy

George HW Bush

Anti-war Rally Demands

at the Lincoln Memorial & march to the White House (Feb. 19, 2023)

Left and right came together to stop this war in Ukraine and avert nuclear war. Organized by the People's Party and Libertarian Party with support from a broad coalition of organizations.

DEMANDS:

1. Not One More Penny for War in Ukraine
2. Negotiate Peace
3. Stop the War Inflation
4. Disband NATO
5. Global Nuclear De-Escalation
6. Slash the Pentagon Budget
7. Abolish the CIA and Military-Industrial Deep State
8. Abolish War and Empire
9. Restore Civil Liberties
10. Free Julian Assange

Pathfinder readers and supporters have said:

- ◆ I always enjoy reading Pathfinder...
- ◆ This is important for people to know...
- ◆ The Pathfinder is unique...
- ◆ One of the best alternative papers in the country.
- ◆ Gives me something to save in every issue.
- ◆ Pathfinder may have saved my life.
- ◆ I love the Pathfinder!
- ◆ Wow, Rose! (The May/June 2020) looks great! Thanks for all your deep and thorough research into the coronavirus. We are making a difference. With much love and warm wishes. (Fred Burks, wantToKnow.info)
- ◆ Thanks for holding their feet to the fire! (Dane Wigington, geoengineeringwatch.org)
- ◆ Pathfinder performs such a good service to the community!
- ◆ It is evident that Pathfinder was created by seekers of truth. Pathfinder issues are strikingly beautiful, filled with soul-inspiring visual works of art. ... Pathfinder is for people who want the truth, enjoy exploration and adventure of the mind and spirit, like to be inspired, appreciate informative holistic wellness knowledge, and are wishing to grow spiritually. ... (V.)
- ◆ Enjoyed the artistic covers (Nov/Dec 22, Jan/Feb 23) — always striking; your editorials, and the articles on the colors of the stars, the ravens/wolves connection, the gold pyramid cluster, 2023 (7 year), MU, the sleep/wake time, astrological overview, M. Yogananda, major arcana cards, the woolly bear caterpillar, intelligent quotes by T. Roosevelt, and quotes from Sco/Sag. especially Beethoven (!)... C. C.
